

Course Content

Lecture 1:

Coulomb's law.....	1
Electric field.....	4
Dirac delta function.....	5
Gauss' law.....	8

Lecture 2:

Electric field from Gauss' law:	
Infinite wire.....	11
Spherical shell.....	12
Infinite plane.....	14
Nature of \mathbf{E} , the potential.....	15
Meaning of the potential.....	19

Lecture 3:

Electrostatic energy.....	20
Potential for simple systems:	
Point particle.....	23
Spherical shell.....	24
Infinitely long wire.....	25

Lecture 4:

Potential for simple systems (contd)	
Circular disc.....	29
Charge displaced along z -axis.....	32
Dipoles.....	34

Lecture 5:

Continuous dipole distribution.....	37
Sphere with a uniform dipole moment density.....	38
Quadrupoles	40
Double layer of charges.....	41

Lecture 6:

Conductors and Insulators.....	44
Capacitors	48
Parallel plate capacitor	49
Spherical capacitor.....	51

Lecture 7:

Boundary value problems.....	53
Method of images	53
Point charge above a grounded conducting plane.....	53
Point charge and intersecting planes.....	59
Point charge in front of a grounded conducting sphere.....	62

Lecture 8:

Boundary condition for ordinary differential equations	67
Partial differential equations.....	68
Uniqueness theorem.....	74

Lecture 9:

Solutions of the Laplace equation	76
General Properties of harmonic functions	76
Solution in Cartesian coordinates	78
Solution in spherical coordinates.....	81

Lecture 10:

Sphere in a uniform electric field.....85
Circular harmonics 87

Lecture 11:

Solution of the Poisson equation 91
Greens function 91
Dirichlet boundary condition 93
Point charge above a conducting plane.....94
Point charge inside a conducting sphere.....97

Lecture 12:

Neumann boundary condition 99
Dielectrics 102

Lecture 13:

Point charge in a dielectric 106
Capacitor filled with dielectric.....108
Boundary conditions in dielectric 109
Dielectric sphere in uniform electric field.....111
Magnetostatics 113
 Lorentz force 113

Lecture 14:

Currents 114
Force on a current due to a magnetic field 116
Magnetic field due to a straight wire.....118
Magnetic field due to a circular current 120
Nature of **B** field 122

Lecture 15:

Vector potential.....	124
Multipole expansion.....	127
Magnetization.....	129

Lecture 16:

Magnetic field intensity.....	132
Boundary conditions.....	134
Uniformly magnetized sphere.....	135
Faraday's law.....	137
Inductance.....	139

Lecture 17:

Maxwell's equations.....	140
Plane wave solutions.....	144
Polarization.....	148

Lecture 18:

Boundary conditions.....	150
Normal incidence.....	152
Oblique incidence.....	154

Lecture 19:

Energy and Poynting vector.....	159
Gauge invariance of Maxwell's equations.....	163

Lecture 20:

Lorentz transformations and covariance of Maxwell's equations.....169

Lecture 21:

Retarded Greens function 179
Lienard-Wiechert potentials 183
Kirchoff's representation 184

Lecture 22:

Simple radiating systems 188
Electric dipole radiation 192
