What forces exist in nature?

What is a force?

How do they interact?

How do forces change with energy or temperature?

How has the universe evolved?

$\pi^0$ 

$$J^G(J^{PC}) = 1^-(0^{-+})$$

Mass  $m = 134.9766 \pm 0.0005$  MeV ( $S = 1.1$ )  
 $m_{\pi^+} - m_{\pi^0} = 4.5936 \pm 0.0005$  MeV  
 Mean life  $\tau = (8.4 \pm 0.6) \times 10^{-17}$  s ( $S = 3.0$ )  
 $c\tau = 25.1$  nm

For decay limits to particles which are not established, use the appropriate Search sections ( $A^0$  (axion), and Other Light Boson ( $X^0$ ) Searches, etc.).

## Lesson 1:

**Size actually does matter.**

Determine the position and velocity of a car ... no problem

**Determine the position and velocity  
of a small particle ... no problem**

**Problem!**  
**Heisenberg**  
**uncertainty**  
**principle**

**Cannot have**  
**perfect**  
**knowledge of**  
**both the position**  
**and velocity**

**Heisenberg**

# The fundamental nature of forces: virtual particles

$$\Delta E \Delta t \approx h \quad \text{Heisenberg}$$

$$E = mc^2 \quad \text{Einstein}$$

QUANTUM Field Theory  $\rightarrow$  Exchange force

<i>Force</i>	<i>Source</i>	<i>Range</i>	<i>Strength</i>
<i>Gravitation</i>	mass	infinite	$10^{-39}$
<i>Electromagnetism</i>	Electric charge	infinite	$10^{-2}$
<i>Strong nuclear</i>	Color charge	$10^{-15}$ m	1
<i>Weak nuclear</i>	Weak charge	$10^{-18}$ m	$10^{-5}$

# The "Fundamental" particles

# Anti matter

$e^- \sim e^+$  Positron  
Anti-electron

$e^- \cup e^+ \longrightarrow \gamma\gamma$

All particles have antiparticles

Why is universe made of matter rather than antimatter?

We don't know why this is true ... yet.

Active area of study ... believe it is probably due to a basic matter-antimatter asymmetry in one of the forces of nature.

# → Standard Model of Particle Physics

Weak interaction

Strong force

## BOSONS

force carriers  
spin = 0, 1, 2, ...

### Unified Electroweak spin = 1

Name	Mass $\text{GeV}/c^2$	Electric charge
$\gamma$ photon	0	0
$W^-$	80.39	-1
$W^+$	80.39	+1
W bosons		
$Z^0$ Z boson	91.188	0

### Strong (color) spin = 1

Name	Mass $\text{GeV}/c^2$	Electric charge
$g$ gluon	0	0

## Properties of the Interactions

The strengths of the interactions (forces) are shown relative to the strength of the electromagnetic force for two u quarks separated by the specified distances.

Property	Gravitational Interaction	Weak Interaction (Electroweak)	Electromagnetic Interaction	Strong Interaction
Acts on:	Mass – Energy	Flavor	Electric Charge	Color Charge
Particles experiencing:	All	Quarks, Leptons	Electrically Charged	Quarks, Gluons
Particles mediating:	Graviton (not yet observed)	$W^+$ $W^-$ $Z^0$	$\gamma$	Gluons
Strength at {	$10^{-18}$ m	0.8	1	25
	$3 \times 10^{-17}$ m	$10^{-41}$	1	60

## Baryons $qqq$ and Antibaryons $\bar{q}\bar{q}\bar{q}$

Baryons are fermionic hadrons.

These are a few of the many types of baryons.

Symbol	Name	Quark content	Electric charge	Mass $\text{GeV}/c^2$	Spin
<b>p</b>	proton	<b>uud</b>	1	0.938	1/2
<b><math>\bar{p}</math></b>	antiproton	<b><math>\bar{u}\bar{u}\bar{d}</math></b>	-1	0.938	1/2
<b>n</b>	neutron	<b>udd</b>	0	0.940	1/2
<b><math>\Lambda</math></b>	lambda	<b>uds</b>	0	1.116	1/2
<b><math>\Omega^-</math></b>	omega	<b>sss</b>	-1	1.672	3/2

Other particles

999

## Mesons $q\bar{q}$

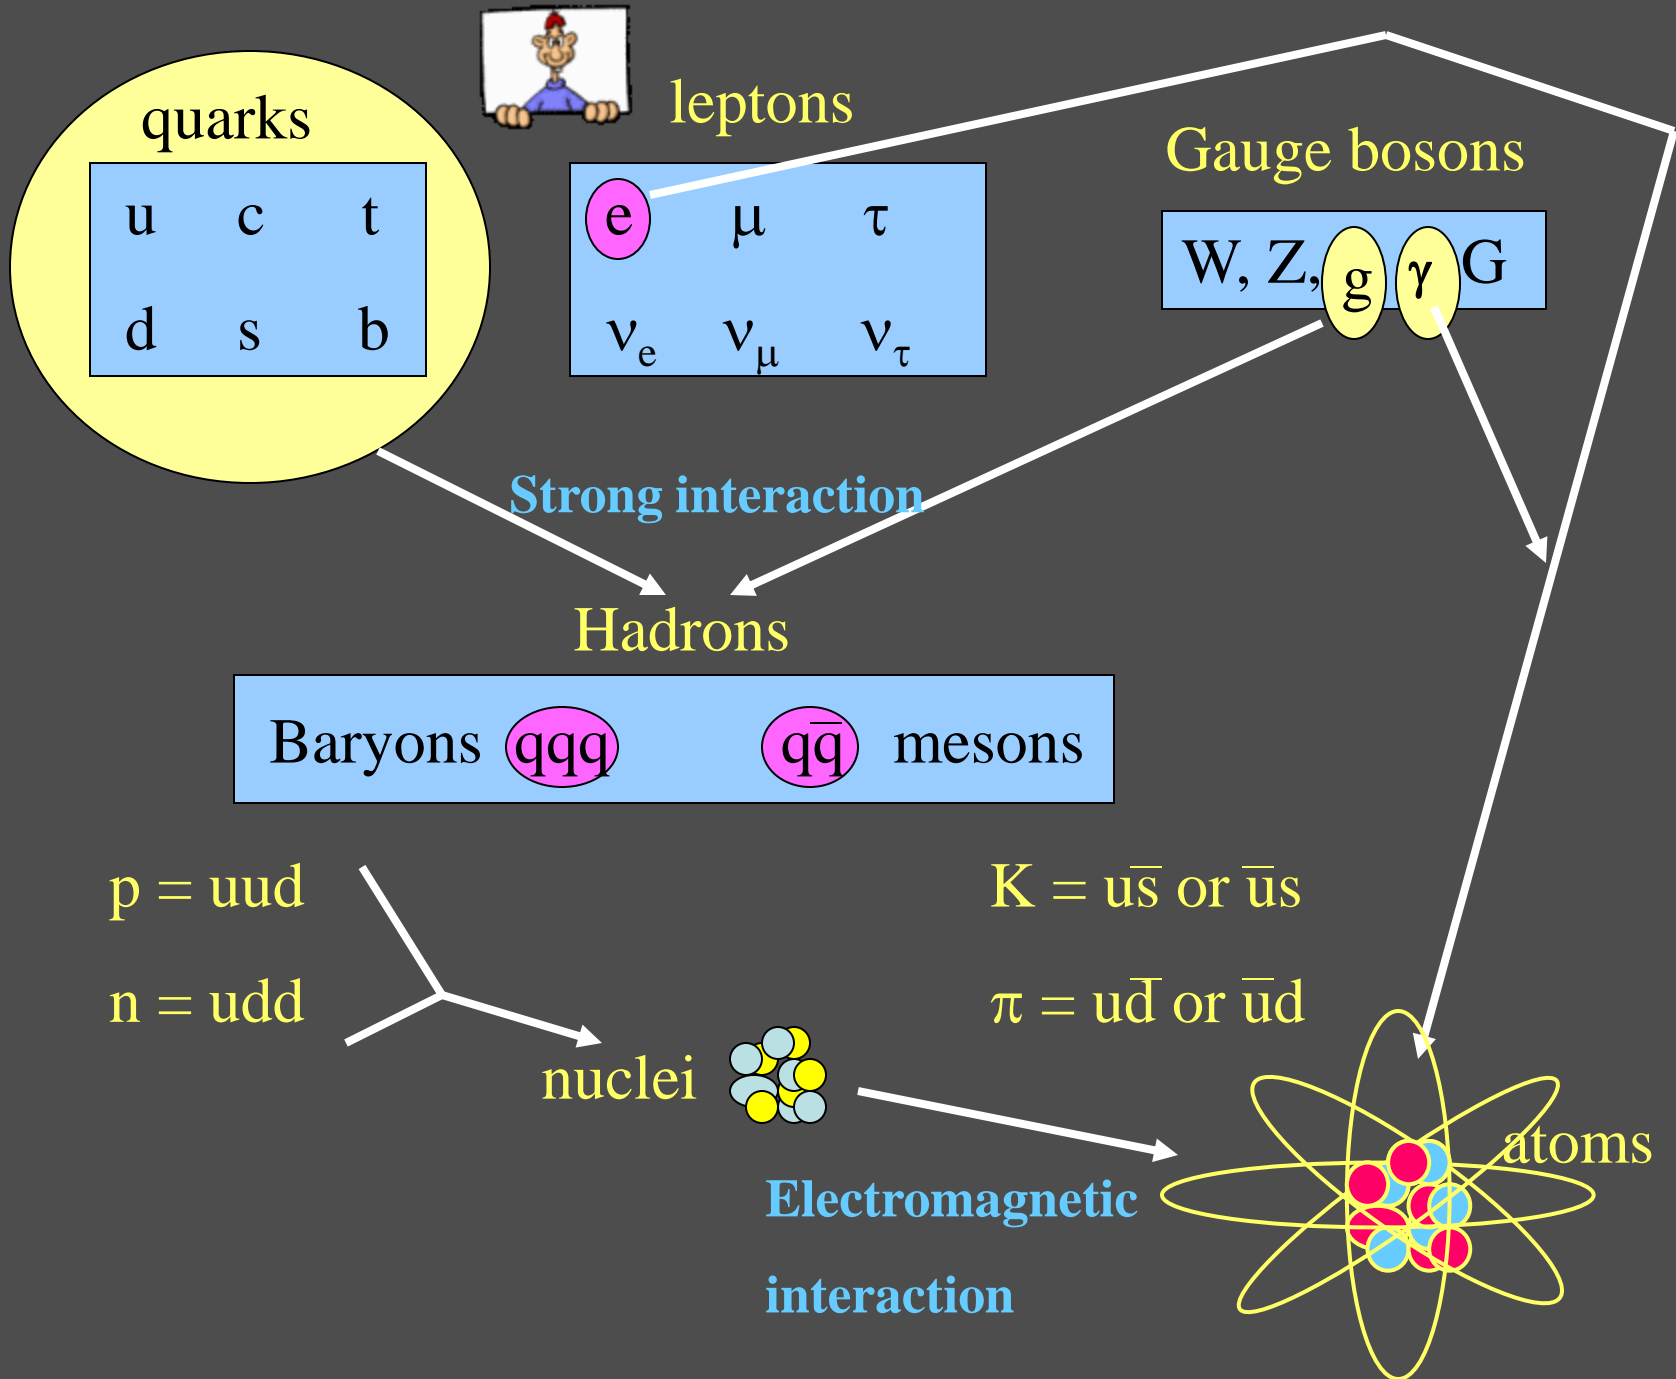

Mesons are bosonic hadrons

These are a few of the many types of mesons.

Symbol	Name	Quark content	Electric charge	Mass $\text{GeV}/c^2$	Spin
$\pi^+$	pion	<b><math>u\bar{d}</math></b>	+1	0.140	0
<b><math>K^-</math></b>	kaon	<b><math>s\bar{u}</math></b>	-1	0.494	0
$\rho^+$	rho	<b><math>u\bar{d}</math></b>	+1	0.776	1
$B^0$	B-zero	<b><math>d\bar{b}</math></b>	0	5.279	0
$\eta_c$	eta-c	<b><math>c\bar{c}</math></b>	0	2.980	0

# Quantum Chromodynamics QCD

Why bare quarks have never been observed.

← energy density, temperature →

Thanks to Mike Lisa (OSU) for parts of this

nucleon-nucleon force - exchange of  $\pi$  (pion)

fine point for completeness

quarks bind quarks into  $p, n, \pi$

Example

## Particle Processes

These diagrams are an artist's conception. Blue-green shaded areas represent the cloud of gluons.

$$n \rightarrow p e^- \bar{\nu}_e$$

A free neutron (udd) decays to a proton (uud), an electron, and an antineutrino via a virtual (mediating) W boson. This is neutron  $\beta$  (beta) decay.

$$e^+ e^- \rightarrow B^0 \bar{B}^0$$

An electron and positron (antielectron) colliding at high energy can annihilate to produce  $\bar{B}^0$  and  $B^0$  mesons via a virtual Z boson or a virtual photon.

~~Higgs~~

We have yet to observe  
the Higgs

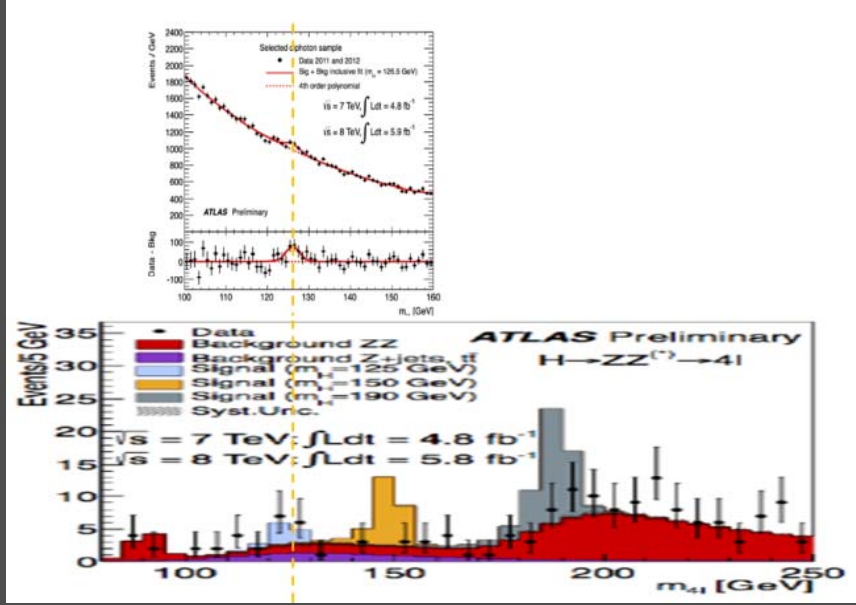

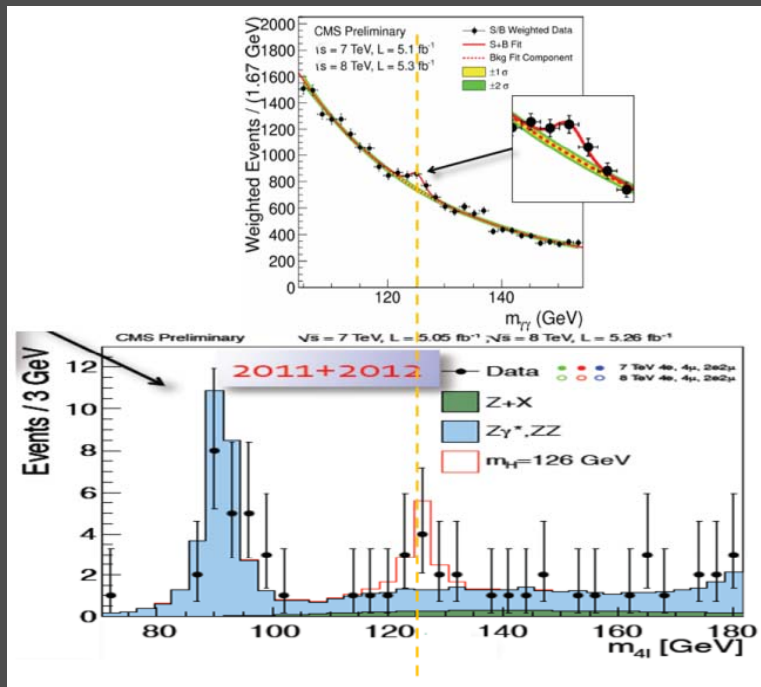

Phenomenal success of STANDARD  
Model forces us to take  
it seriously ...  
So, we know that

STANDARD Model  
↑  
{ Electromagnetic } + { Strong }  
Weak

Something does what the Higgs does

could be something besides a fundamental particle

Supersymmetry is one such possibility,  
May talk abt this later in course.

Modern accelerators study processes at energies that existed VERY early in the universe

Another form of time travel !

What were forces like at those temperatures?

What types of particles existed?
