

Physics 100 - March 30, 2009

- Presentation groups ... Meet/Plan to meet Soon

<http://doodle.com>

Web utility I've found useful for
Setting up meetings with groups

last time

intimate relation between the large
+ small drive the stars and
synthesize the elements

- gravity pulls in
- heat (radiation pressure) pushes out
- "Thermonuclear" fusion reactions in core
- STARTS w/ $H \rightarrow He$ but can work way up to ^{56}Fe
- Heavier elements formed in Supernovae

Rotation comes from
Conservation of
"Angular Momentum"

- white dwarfs, neutron stars, Black Holes
- STAR forms
planets form

Inherent Nuclear Stability as function of nuclear size

Elements heavier than ^{56}Fe are synthesized in Supernovae

$M < 8 M_{\odot} \longrightarrow$ planetary nebulae

$\searrow$ white dwarfs

$M > 8 M_{\odot} \longrightarrow$ neutron star (pulsar)
or

Black hole

Dead shell star
held up
by atomic shells

neutron star

held up by
neutrons

Black hole

Voyage into inner Space

$u \equiv$ up quark $q = +\frac{2}{3}|e|$

$d \equiv$ down quark $q = -\frac{1}{3}|e|$

Particle (high energy) Physics

New Taxonomy of Particles
New way of looking at forces

a little overwhelming at 1st ...

The Standard Model!

What forces exist in nature?

What is a force?

How do they interact?

How do forces change with energy or temperature?

How has the universe evolved?

$$\pi^0$$

$$J^G(J^{PC}) = 1^-(0^{-+})$$

$$\text{Mass } m = 134.9766 \pm 0.0006 \text{ MeV} \quad (S = 1.1)$$

$$m_{\pi^+} - m_{\pi^0} = 4.5936 \pm 0.0005 \text{ MeV}$$

$$\text{Mean life } \tau = (8.4 \pm 0.6) \times 10^{-17} \text{ s} \quad (S = 3.0)$$

$$c\tau = 25.1 \text{ nm}$$

For decay limits to particles which are not established, use the appropriate Search sections (A^0 (axion), and Other Light Boson (X^0) Searches, etc.).

Laboratory beam momentum (GeV/c)

Mini-Ph.D. – Quantum Mechanics 101

Lesson 1:

Size actually does matter.

Determine the position and velocity of a
car ... no problem

**Determine the position and velocity of a
small particle ... no problem**

Problem!
Heisenberg
uncertainty
principle

Cannot have perfect
knowledge of both
the position and
velocity

Heisenberg

The fundamental nature of forces: virtual particles

$$\Delta E \Delta t \approx h \quad \text{Heisenberg}$$

$$E = mc^2 \quad \text{Einstein}$$

QUANTUM Field Theory $\rightarrow$ Exchange force

<i>Force</i>	<i>Source</i>	<i>Range</i>	<i>Strength</i>
<i>Gravitation</i>	mass	infinite	10^{-39}
<i>Electromagnetism</i>	Electric charge	infinite	10^{-2}
<i>Strong nuclear</i>	Color charge	10^{-15} m	1
<i>Weak nuclear</i>	Weak charge	10^{-18} m	10^{-5}

The "Fundamental" particles

Anti matter

$e^- \sim e^+$ Positron
Anti-electron

All particles have antiparticles

Why is universe made of matter rather than antimatter?

we don't know why this is true ... yet.

Active area of study ... believe it is probably due to a basic matter-antimatter asymmetry in one of the forces of nature.

→ Standard Model of Particle Physics

Decent
online sources
of
information
- please read

$$\Delta E \Delta T \gtrsim \hbar$$

BOSONS

force carriers
spin = 0, 1, 2, ...

Unified Electroweak spin = 1

Name	Mass GeV/c ²	Electric charge
γ photon	0	0
W^-	80.39	-1
W^+ W bosons	80.39	+1
Z^0 Z boson	91.188	0

Strong (color) spin = 1

Name	Mass GeV/c ²	Electric charge
g gluon	0	0

Properties of the Interactions

The strengths of the interactions (forces) are shown relative to the strength of the electromagnetic force for two u quarks separated by the specified distances.

Property	Gravitational Interaction	Weak Interaction (Electroweak)	Electromagnetic Interaction	Strong Interaction
Acts on:	Mass – Energy	Flavor	Electric Charge	Color Charge
Particles experiencing:	All	Quarks, Leptons	Electrically Charged	Quarks, Gluons
Particles mediating:	Graviton (not yet observed)	W^+ W^- Z^0	γ	Gluons
Strength at {	10^{-18} m	0.8	1	25
	3×10^{-17} m	10^{-4}	1	60

Baryons qqq and Antibaryons $\bar{q}\bar{q}\bar{q}$

Baryons are fermionic hadrons.

These are a few of the many types of baryons.

Symbol	Name	Quark content	Electric charge	Mass GeV/c^2	Spin
p	proton	uud	1	0.938	1/2
$\bar{p}$	antiproton	$\bar{u}\bar{u}\bar{d}$	-1	0.938	1/2
n	neutron	udd	0	0.940	1/2
Λ	lambda	uds	0	1.116	1/2
Ω^-	omega	sss	-1	1.672	3/2

Other particles

Mesons $q\bar{q}$

Mesons are bosonic hadrons

These are a few of the many types of mesons.

Symbol	Name	Quark content	Electric charge	Mass GeV/c^2	Spin
π^+	pion	$u\bar{d}$	+1	0.140	0
K^-	kaon	$s\bar{u}$	-1	0.494	0
ρ^+	rho	$u\bar{d}$	+1	0.776	1
B^0	B-zero	$d\bar{b}$	0	5.279	0
η_c	eta-c	$c\bar{c}$	0	2.980	0

Quantum Chromodynamics QCD

Why bare quarks have never been observed.

relative strength

Thanks to Mike Lisa (OSU) for parts of this animation

nucleon-nucleon force - exchange of π (pion)

fine point for
completeness

Example

Particle Processes

These diagrams are an artist's conception. Blue-green shaded areas represent the cloud of gluons.

$$n \rightarrow p e^- \bar{\nu}_e$$

A free neutron (udd) decays to a proton (uud), an electron, and an antineutrino via a virtual (mediating) W^- boson. This is neutron β (beta) decay.

$$e^+ e^- \rightarrow B^0 \bar{B}^0$$

An electron and positron (antielectron) colliding at high energy can annihilate to produce $\bar{B}^0$ and B^0 mesons via a virtual Z boson or a virtual photon.

The Vacuum

-R. Kolb

Much ado about NOTHING:

Nothing is something

Nothing has energy

Nothing interacts with something
