

Analyzing TeV Gamma-Ray Binary Candidates with the HAWC Observatory

Ryan Rubenzahl - University of Rochester
Astronomy/Astroparticle Physics - Professor Segev BenZvi
August 5, 2016

Mapping the Northern Sky in High-Energy Gamma Rays

HAWC Observatory

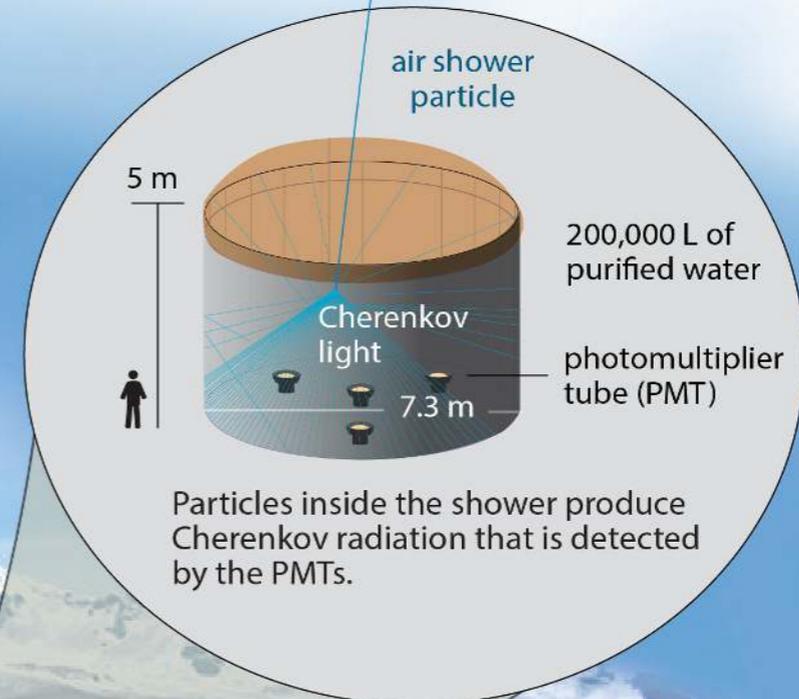

HAWC operates day and night, providing a large field of view for the observation of the highest energy gamma rays.

Pico de Orizaba
(5,626 m)

Water Cherenkov tank

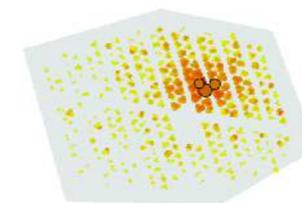

HAWC comprises an array of 300 tanks that record the particles created in gamma-ray and cosmic-ray showers.

Gamma rays vs cosmic rays

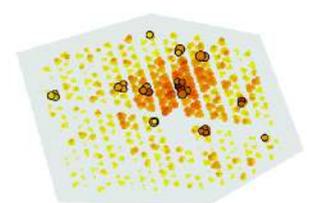

HAWC selects gamma rays from among a much more abundant background of cosmic rays.

gamma-ray shower

"hot" spots concentrate around the core

cosmic-ray shower

"hot" spots are more dispersed

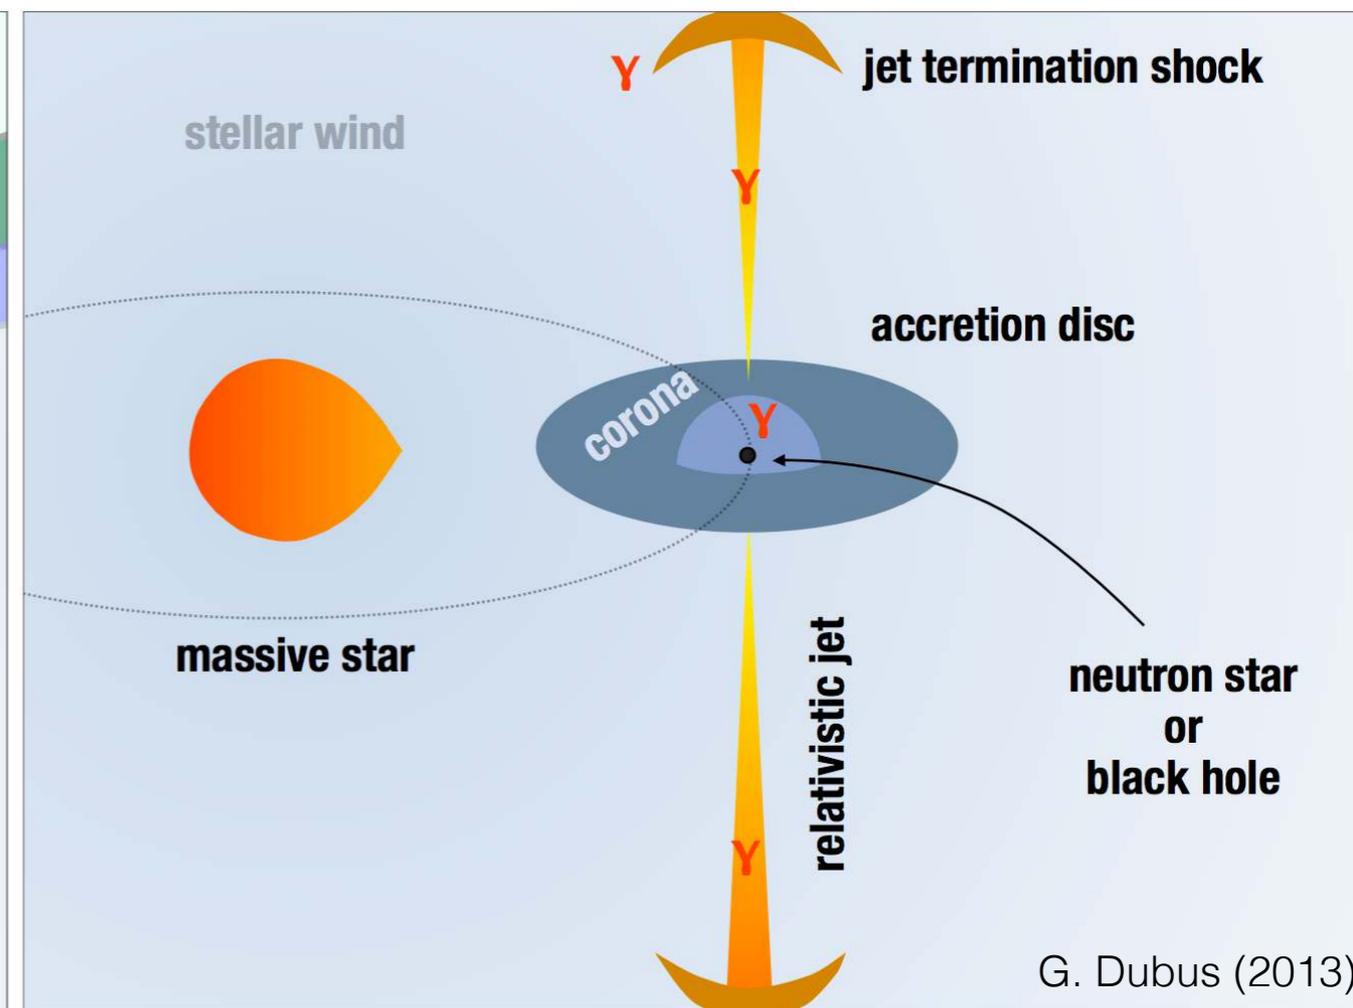

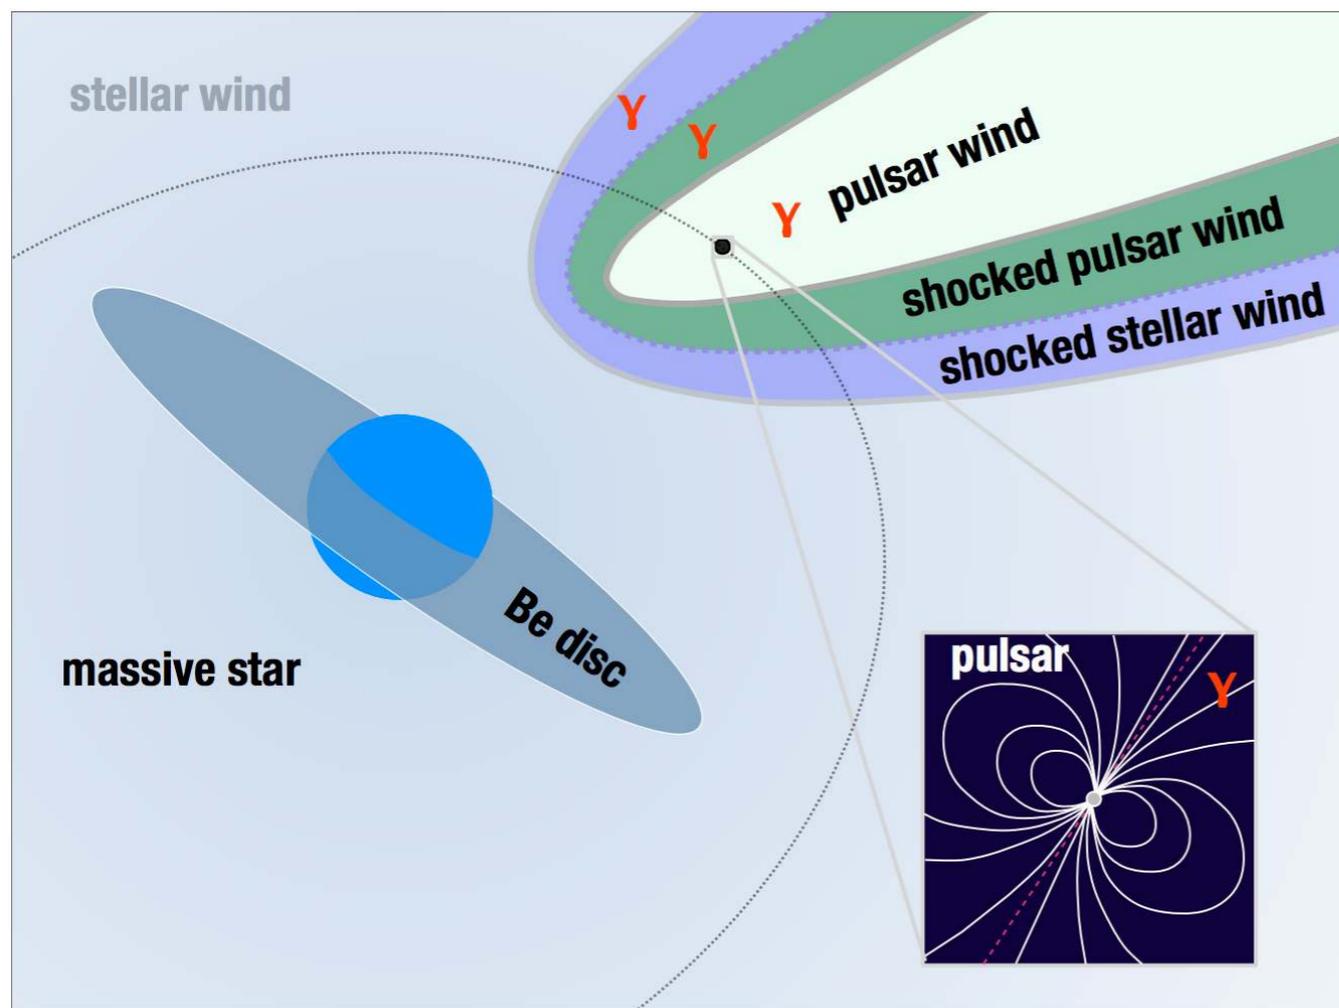

HAWC is located at 4,100 m above sea level, covering an area of 20,000 m².

150 m

Gamma-Ray Binaries

UNIVERSITY of
ROCHESTER

G. Dubus (2013)

Binary Pulsar

- Pulsar wind interacting with stellar wind

Microquasar

- Energy released by accretion
- Relativistic jet acceleration
- Jet termination shock with ISM

Known TeV Binaries

UNIVERSITY of
ROCHESTER

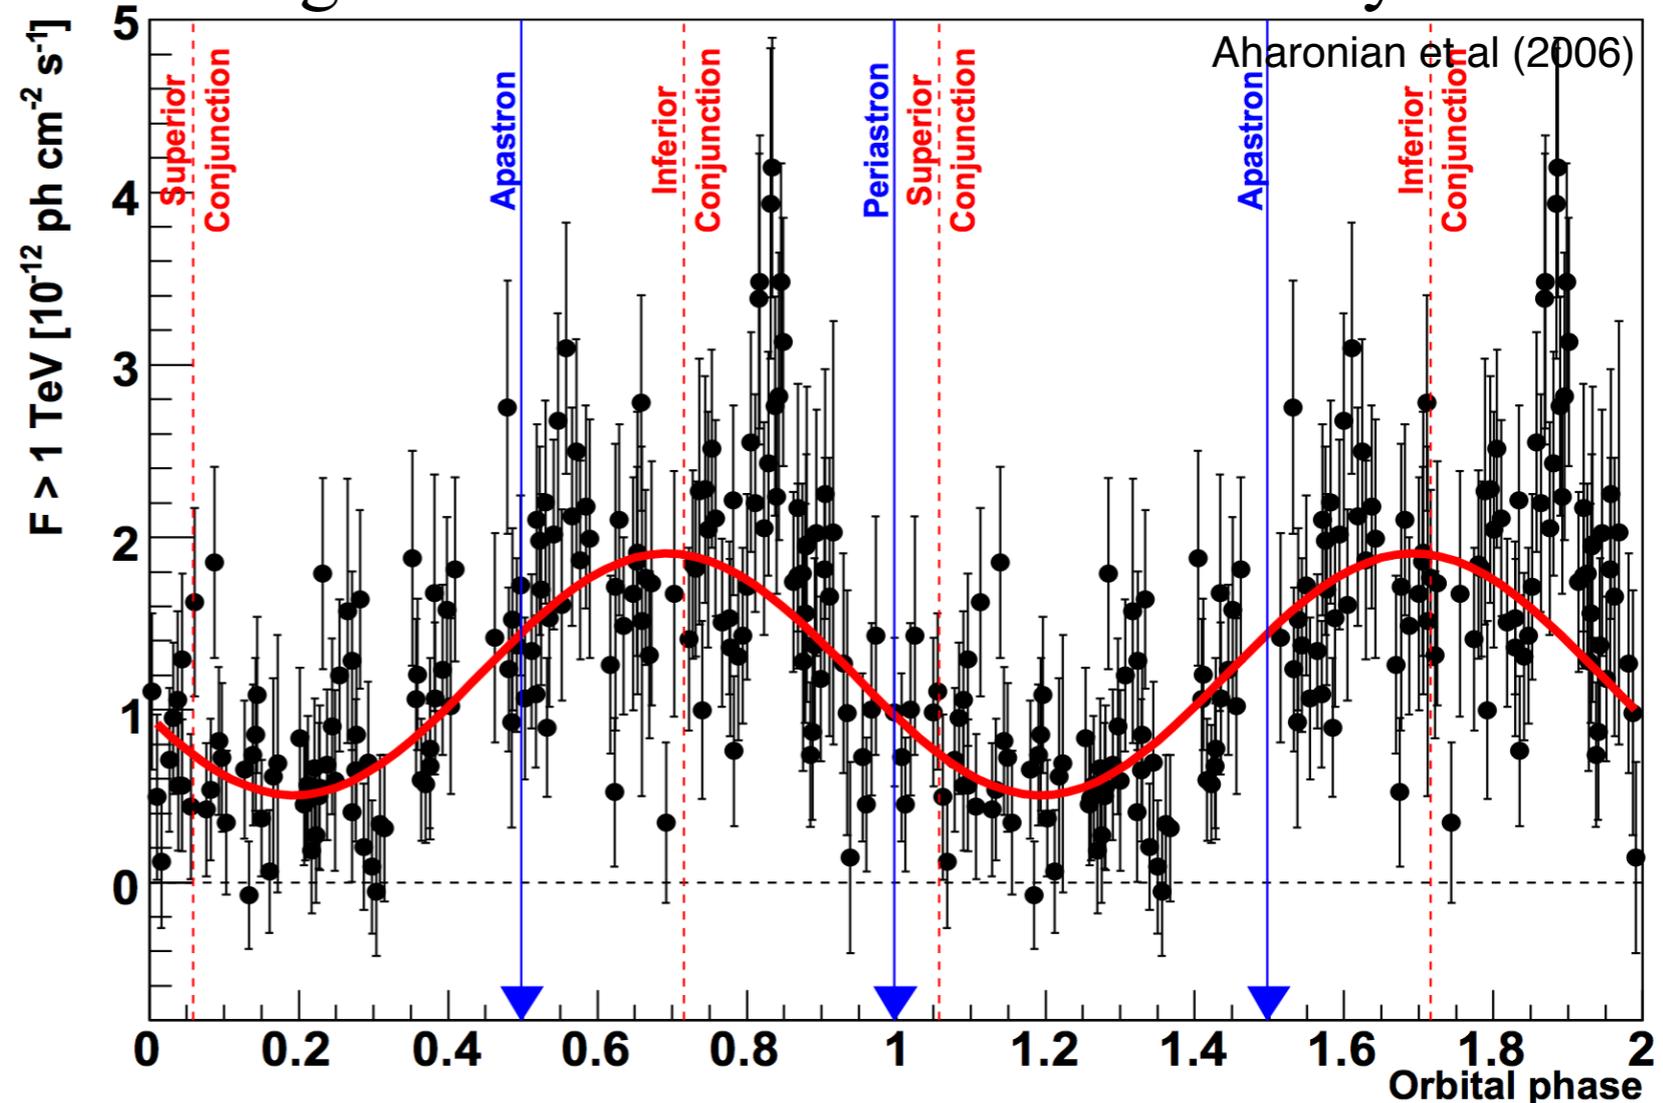

Visible from HAWC:

- HESS J0632+057
- LS I +61° 303
- LS 5039

Not Visible:

- PSR B1259-63
- 1FGL J1018.6-5856

Integral Flux of LS 5039 measured by HESS

Natural, regularly occurring
(periodic) particle accelerators

Analysis with 3ML

- Multi-Mission Maximum Likelihood framework (3ML)
 - **Python**-based tool for multi-wavelength analysis
- Fit power law spectrum to data and calculate **likelihood** (L)
- Use $\min(-\log(L))$ as seed for Markov chain Monte Carlo
 - Get **full distribution of K**
- Calculate **integral flux** for each day
 - data from Nov 26, 2014 – Feb 12, 2016 (**444 days**)
- Cut out days where fractional transit < 0.75

Spectral Fit Parameters

UNIVERSITY of
ROCHESTER

- Simple power law spectrum

$$f(E) = K \left(\frac{E}{E_0} \right)^{-\Gamma} \quad (1)$$

$$\text{IntFlux} = \frac{E_0 \times K}{-\Gamma + 1} \quad (2)$$

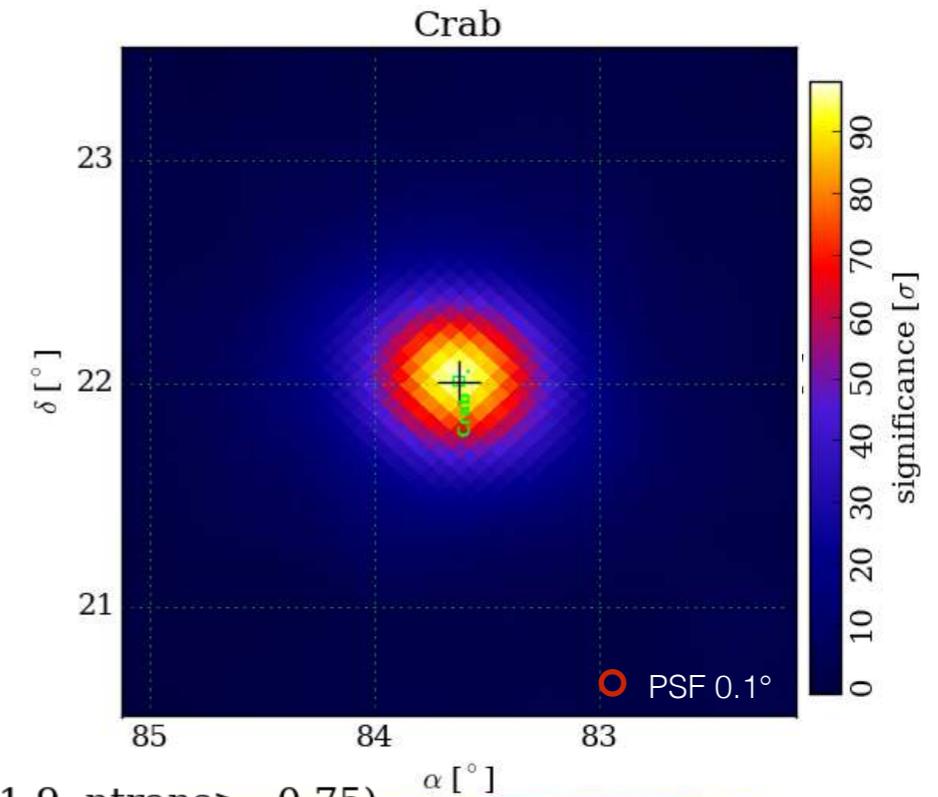

- Pivot energy = 1 TeV
- **Fixed** spectral index: $\Gamma = 2.7$
- **Free** normalization K

Crab Nebula

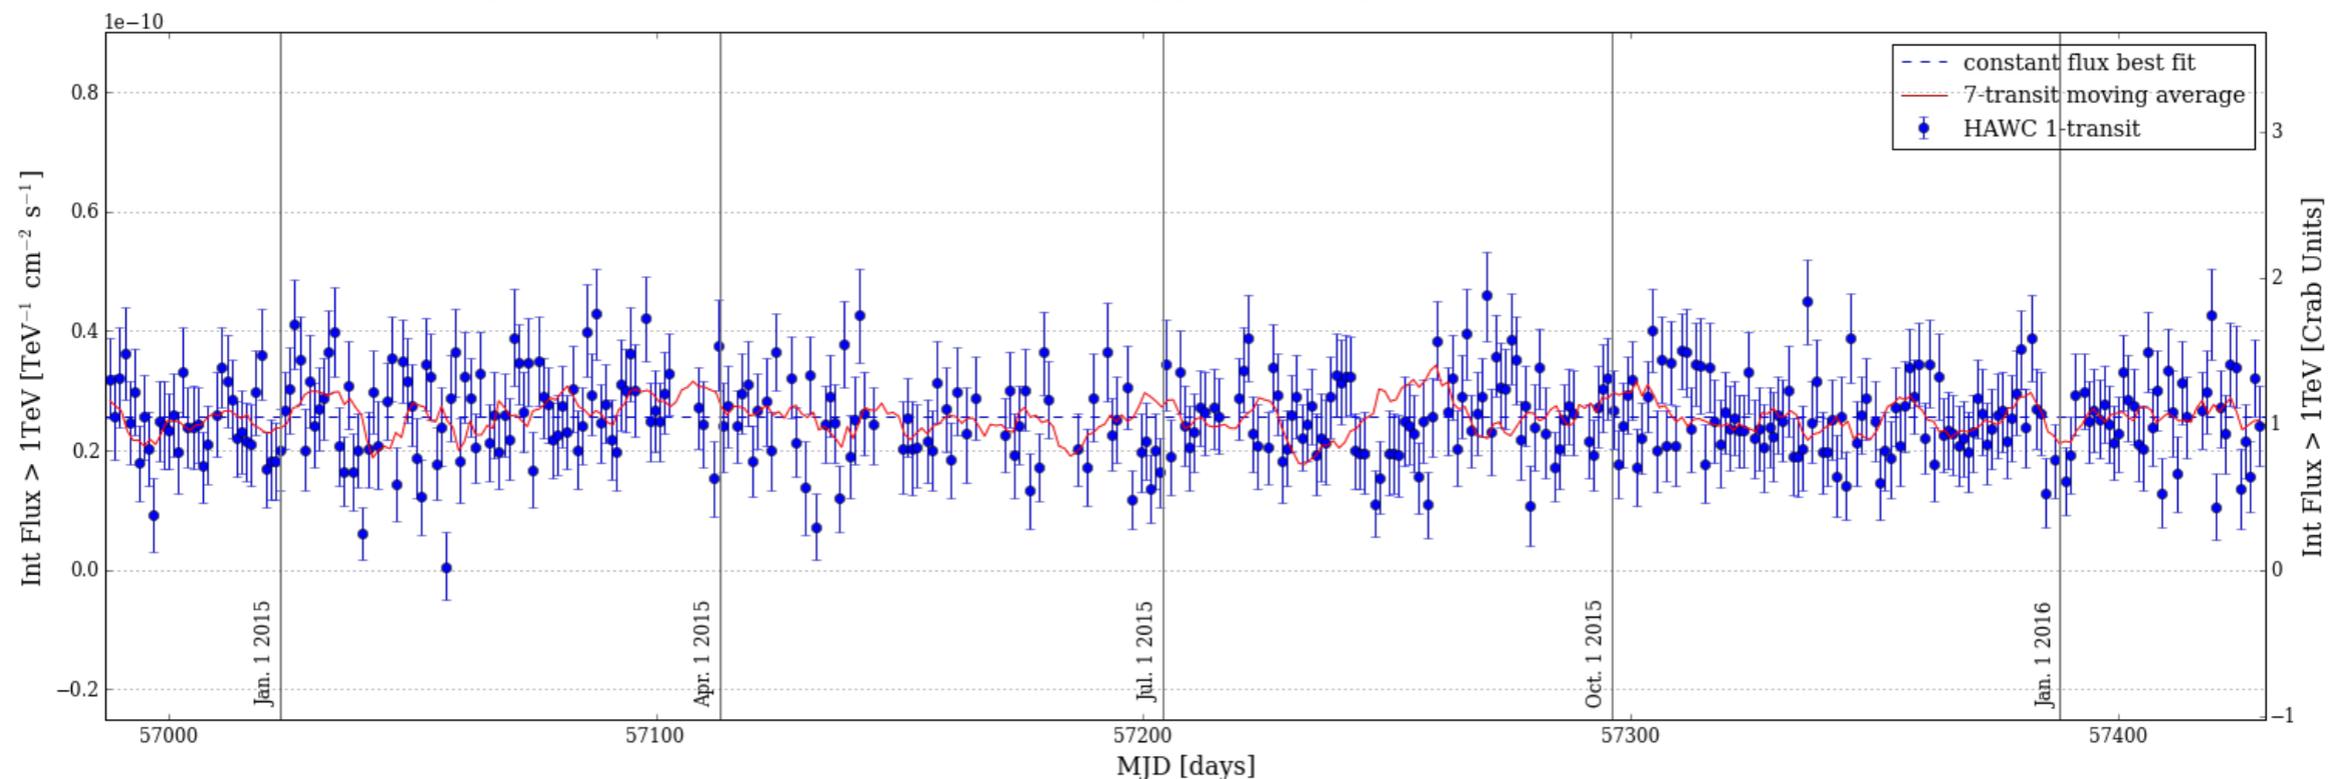

UNIVERSITY of ROCHESTER

- RA: 83.63° , Dec: 22.01°
- Example of **constant flux**
- Mean IntFlux: $2.489 \times 10^{-11} \text{ TeV}^{-1} \text{ cm}^{-2} \text{ s}^{-1}$

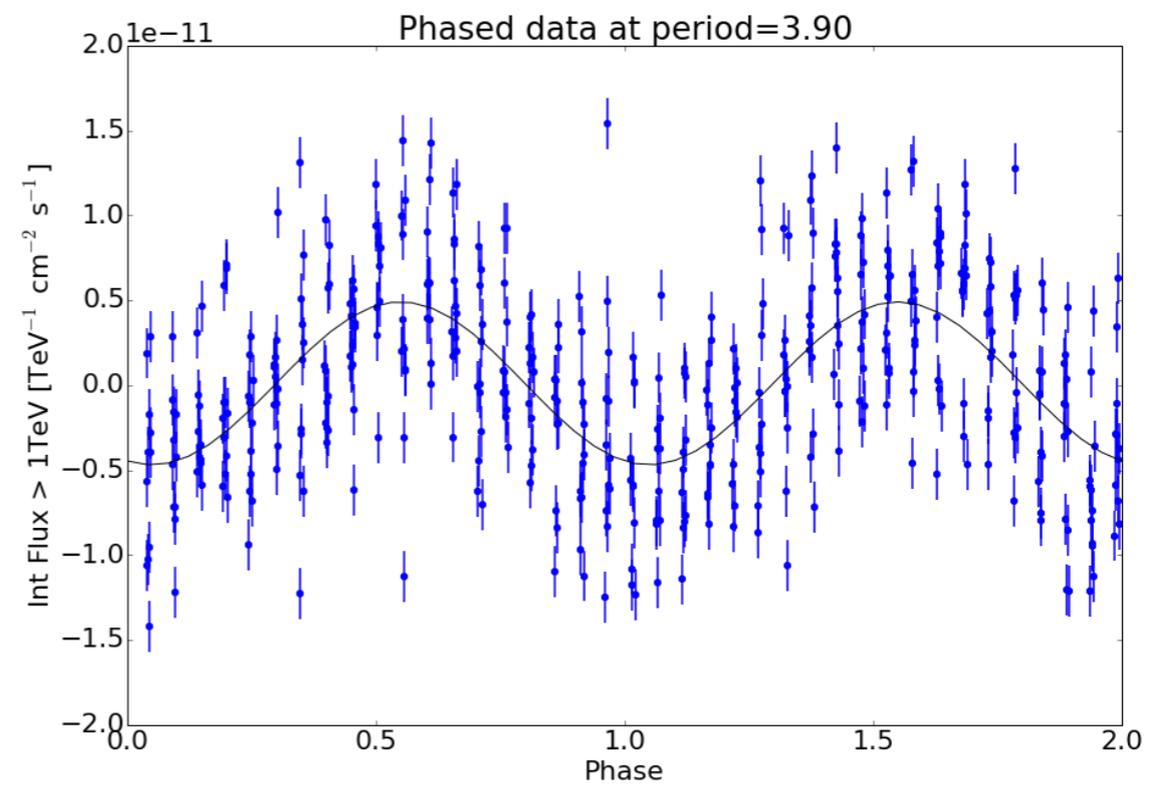

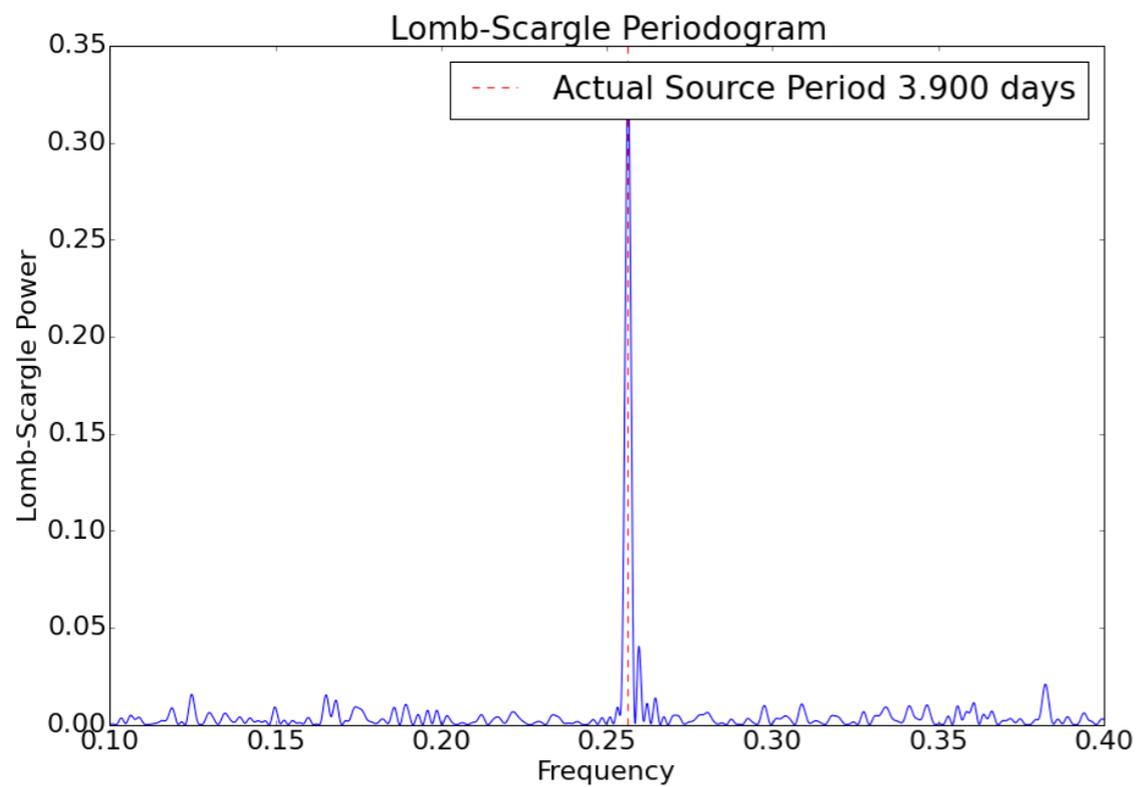

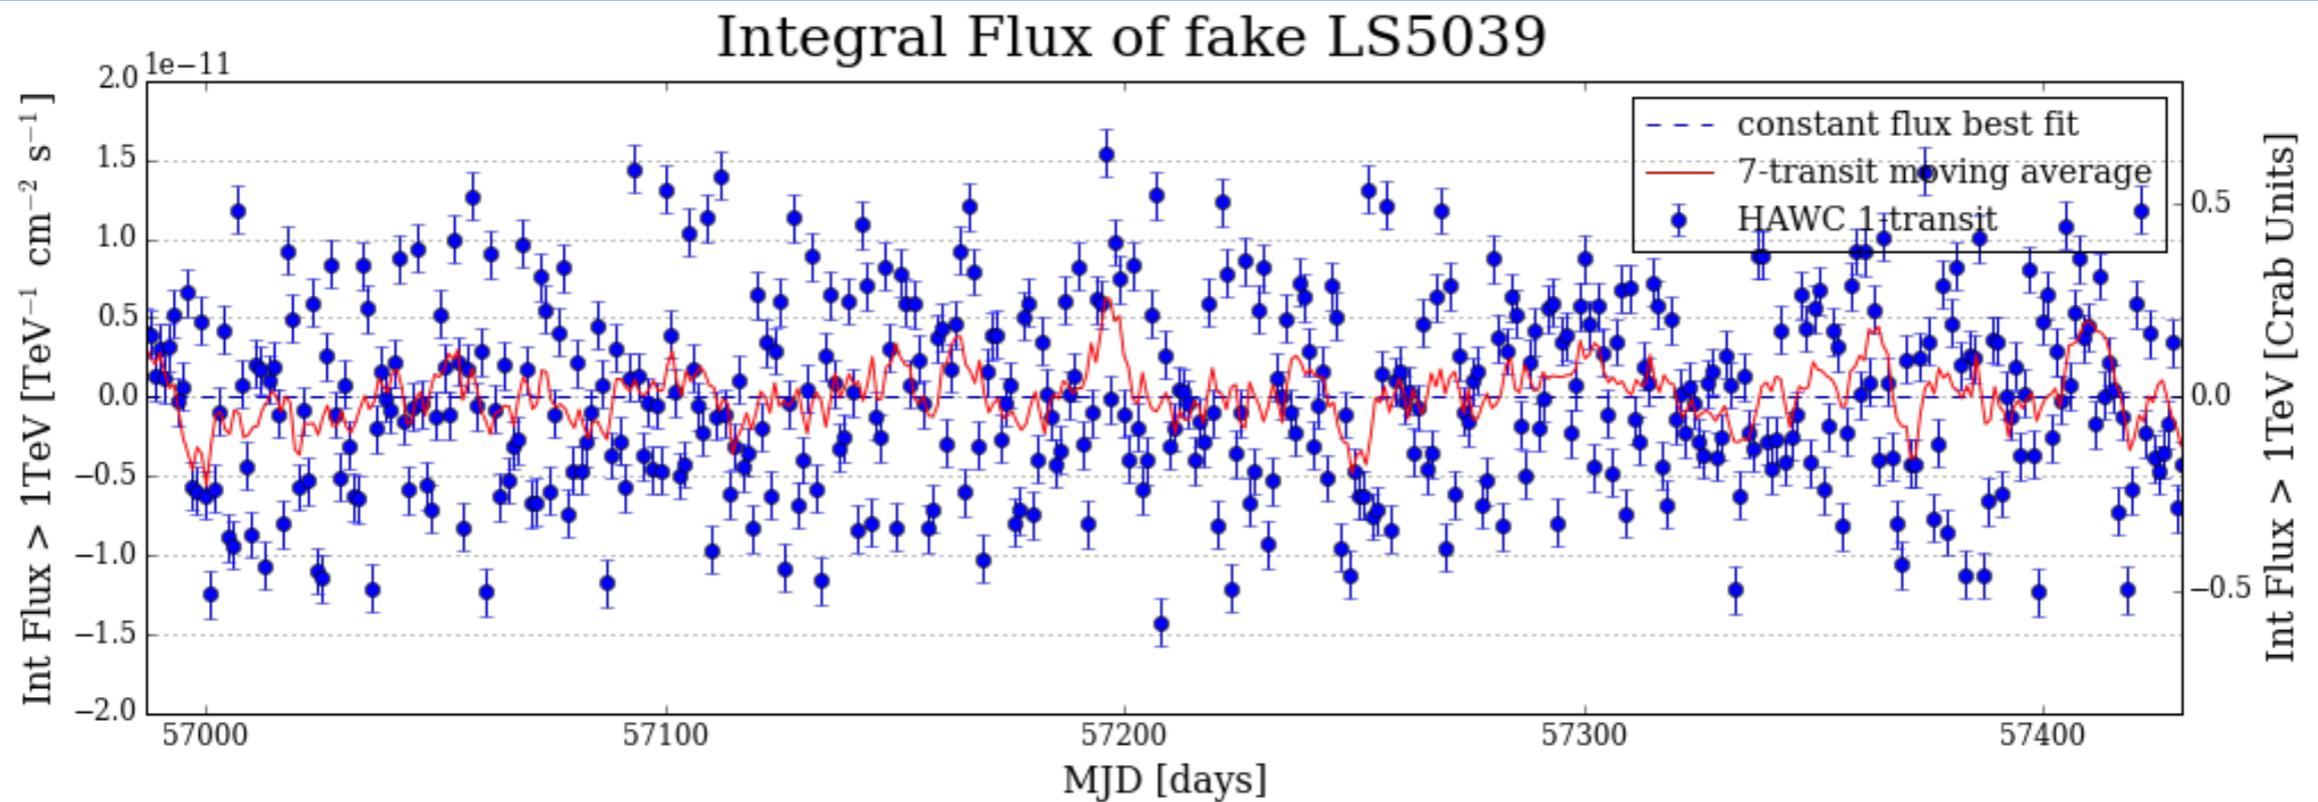

Integral Flux of Crab (3ML w/ sdi rejiggered maps, bins 1-9, ntrans ≥ 0.75)

What To Look For

UNIVERSITY of ROCHESTER

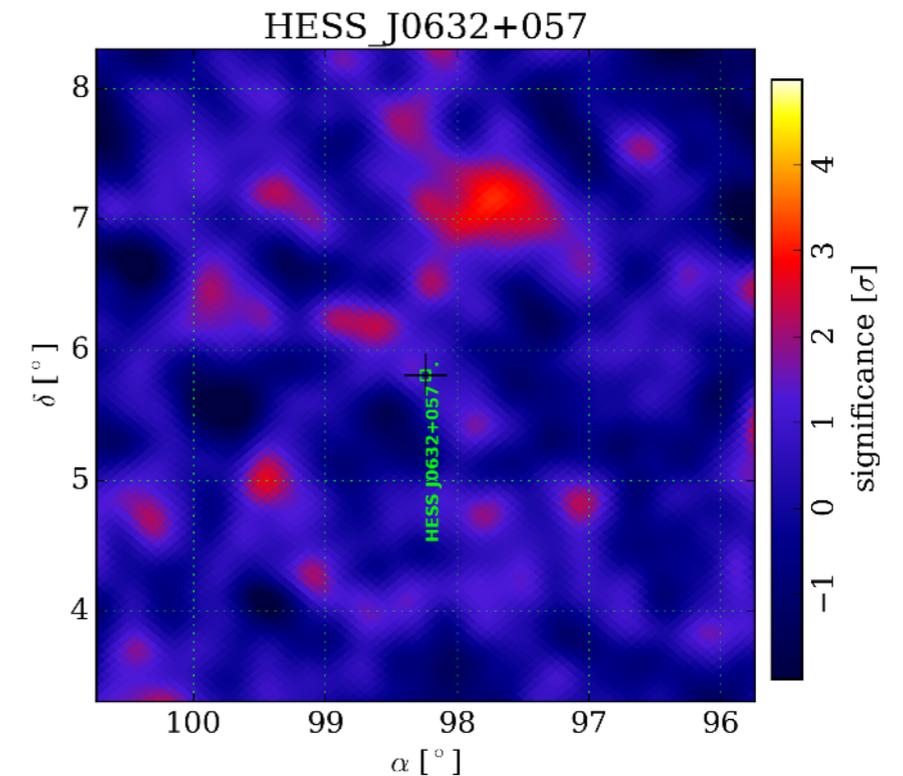

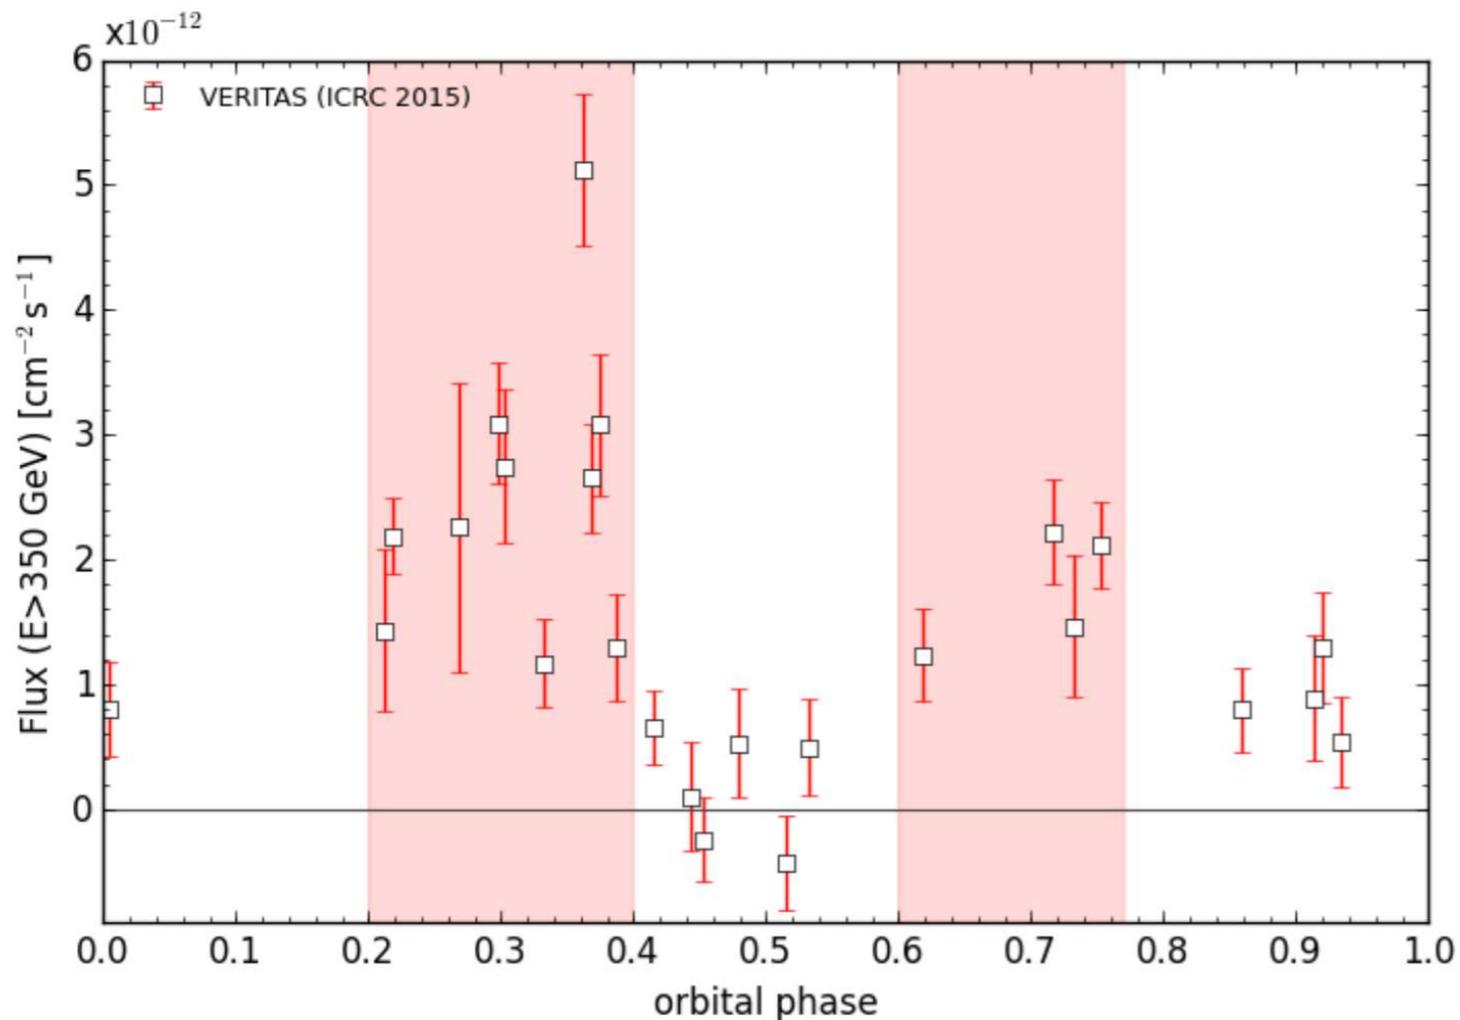

HESS J0632+057

UNIVERSITY of
ROCHESTER

- RA: 98.24° , Dec: 5.81°
- Period: 315 days
- Flux has **two maxima**

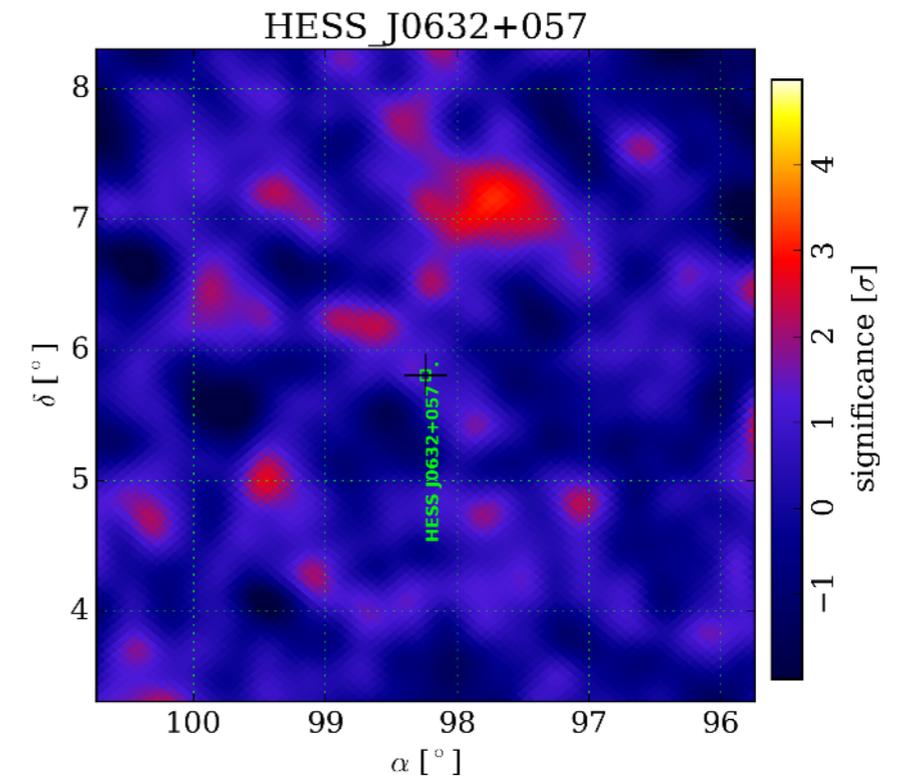

- Observations by VERITAS show periods of high flux ($E > 350$ GeV)
- **0.2-0.4** and **0.6-0.78** phase

HESS J0632+057

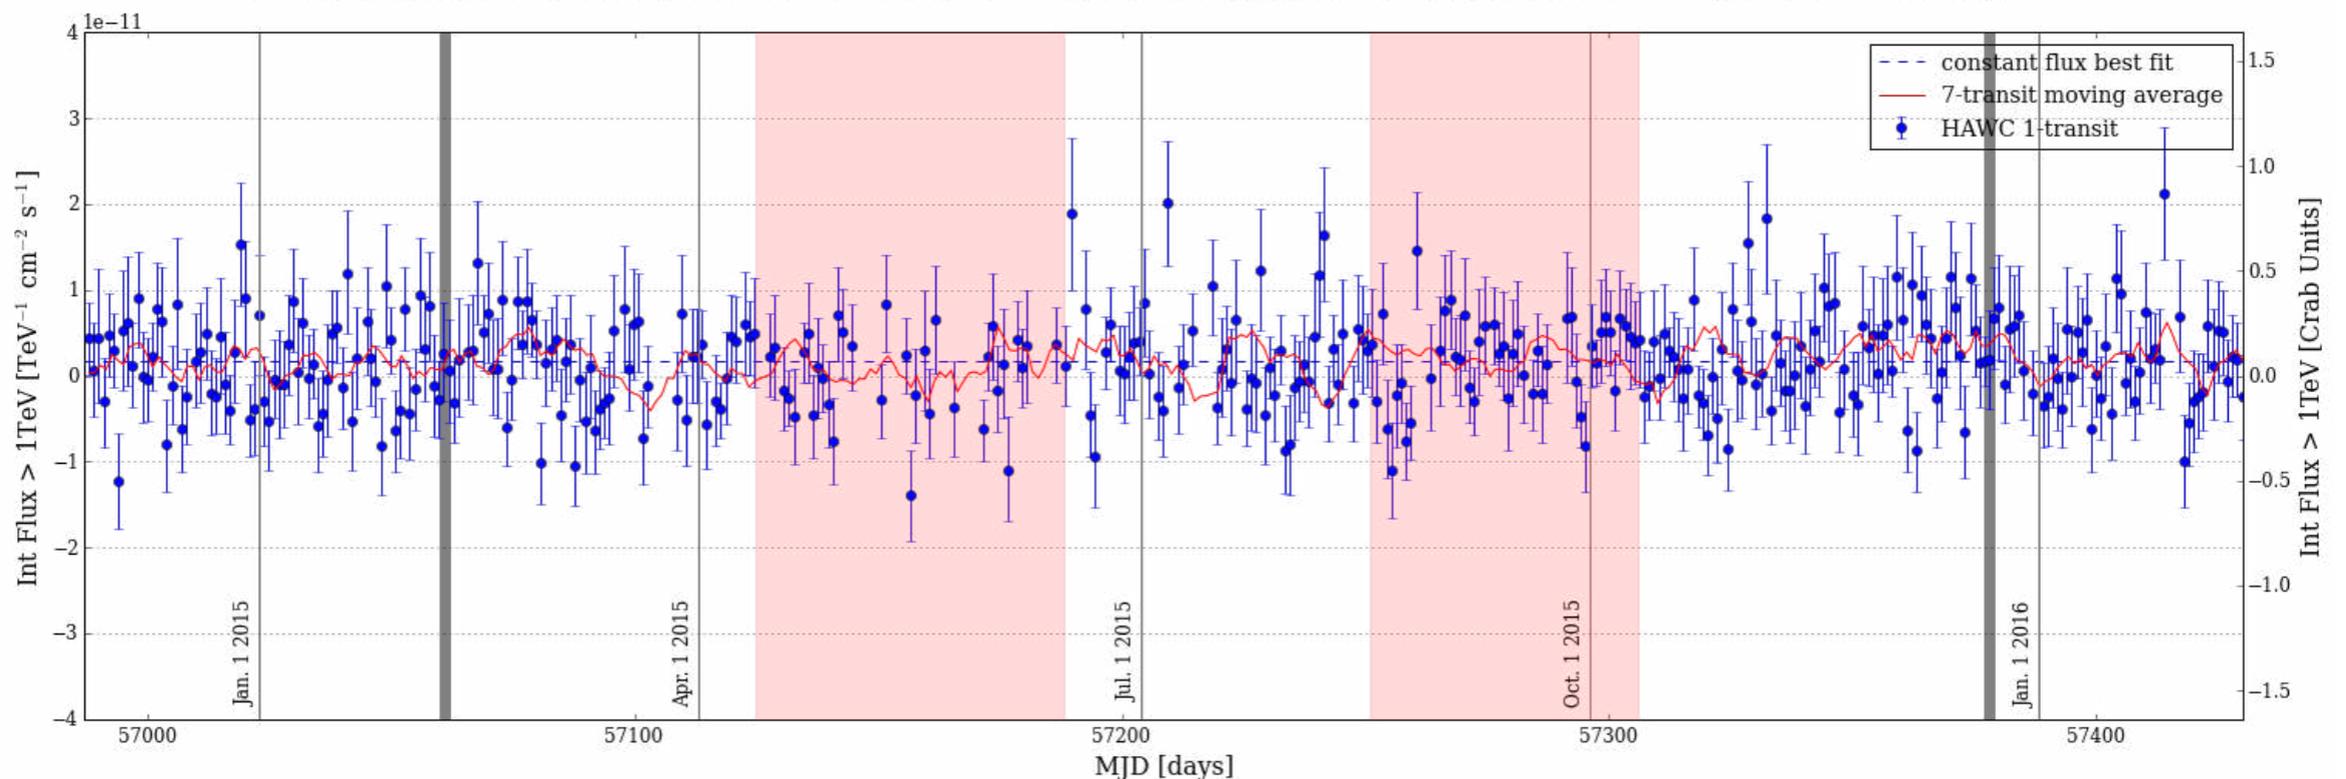

UNIVERSITY of
ROCHESTER

- RA: 98.24° , Dec: 5.81°
- Period: 315 days
- Mean IntFlux: $1.975 \times 10^{-12} \text{ TeV}^{-1} \text{ cm}^{-2} \text{ s}^{-1}$
- High states **not observed**

Integral Flux of HESS J0632+057 (3ML w/ sdi rejiggered maps, bins 1-9, ntrans >= 0.75)

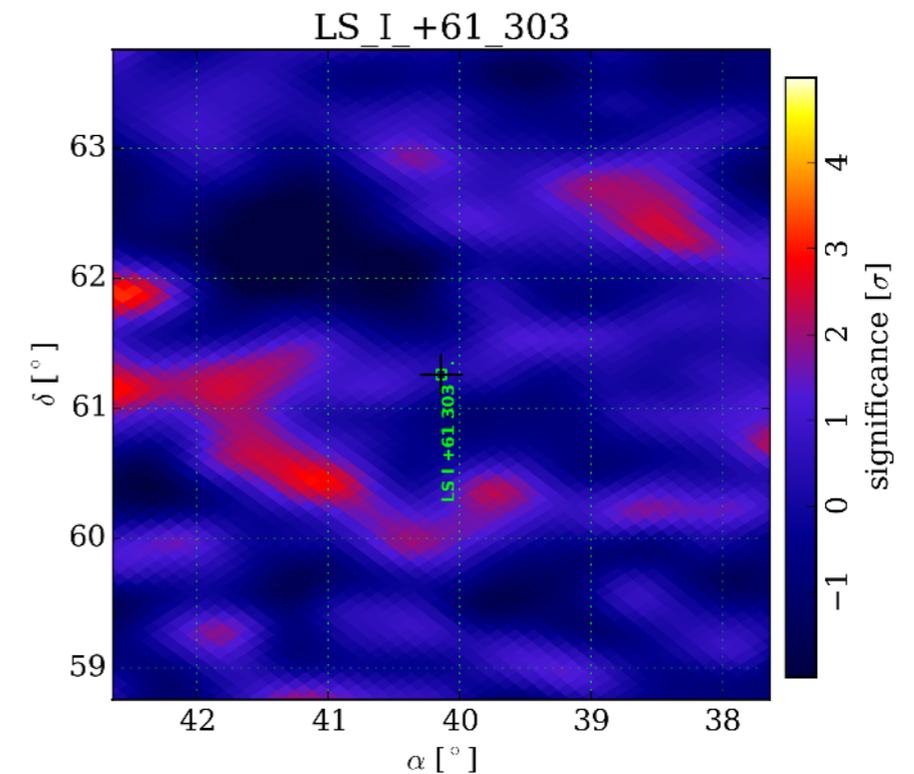

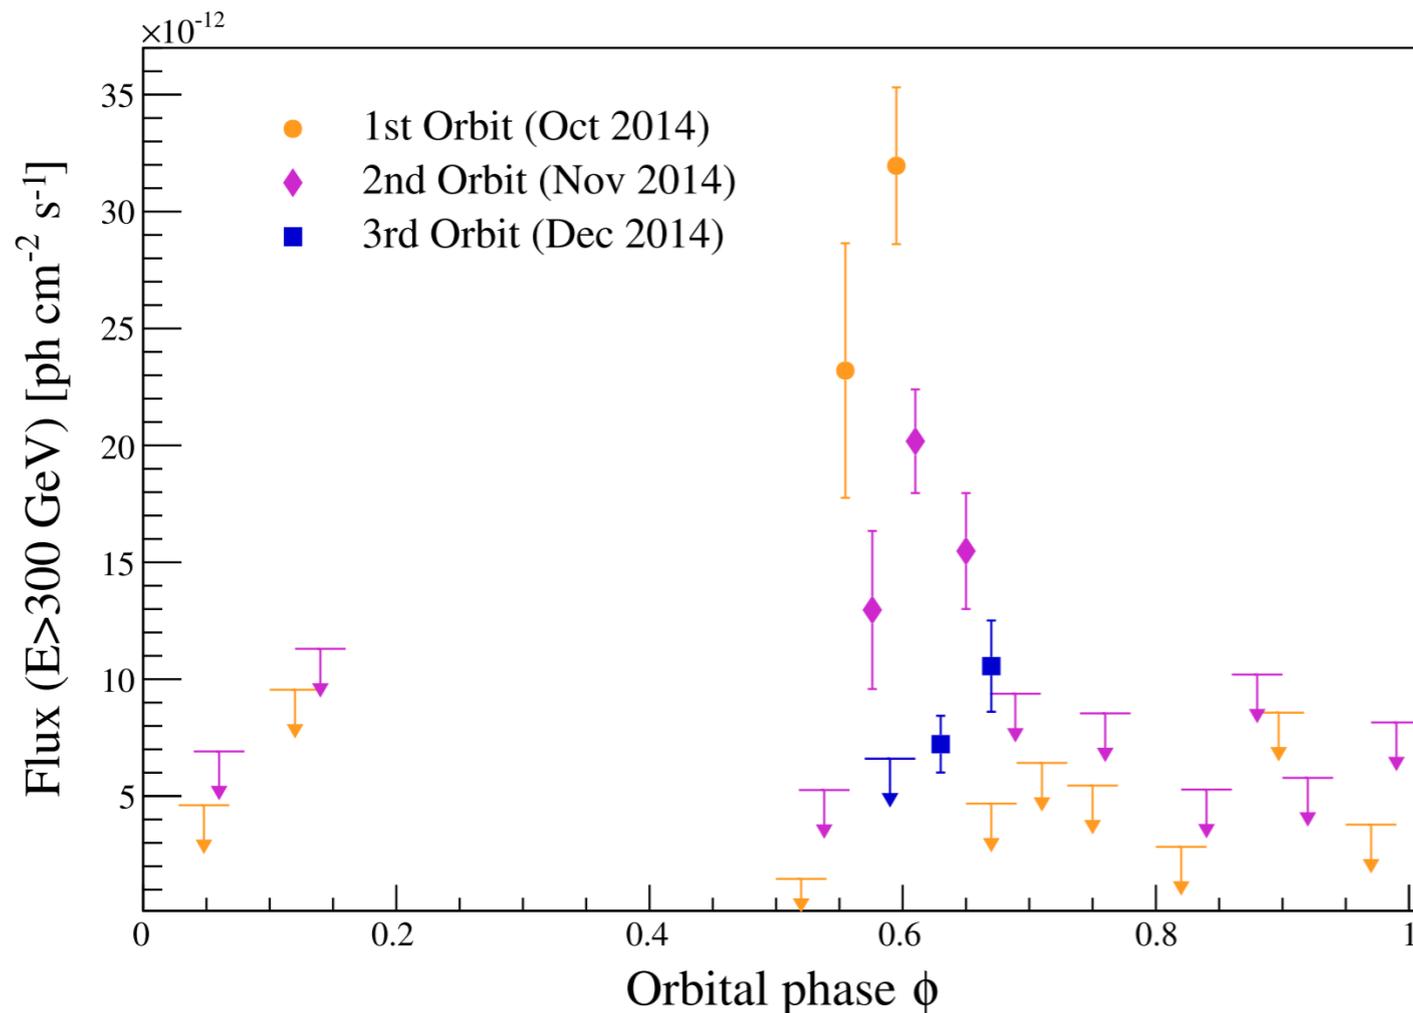

LS I +61° 303

UNIVERSITY of
ROCHESTER

- RA: 40.14° , Dec: 61.26°
- Period: 26.71 days
- **Intense flares** in flux

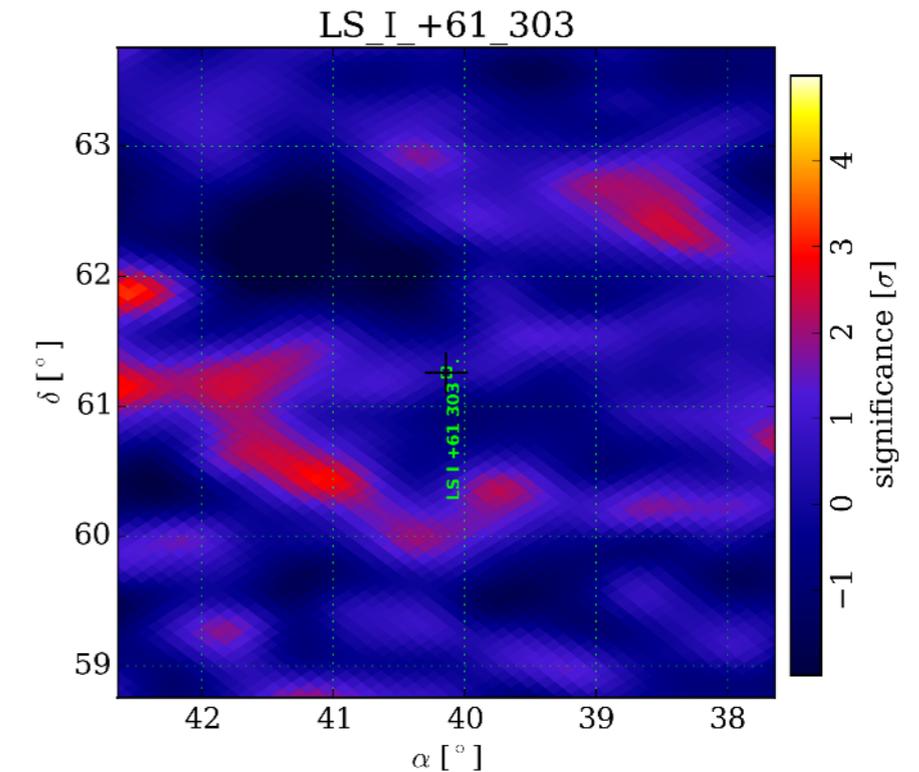

- Observations by VERITAS show **bright flares** ($E > 300$ GeV)
- **0.5 - 0.6** phase
- Only TeV observations were during these flares

LS I +61° 303

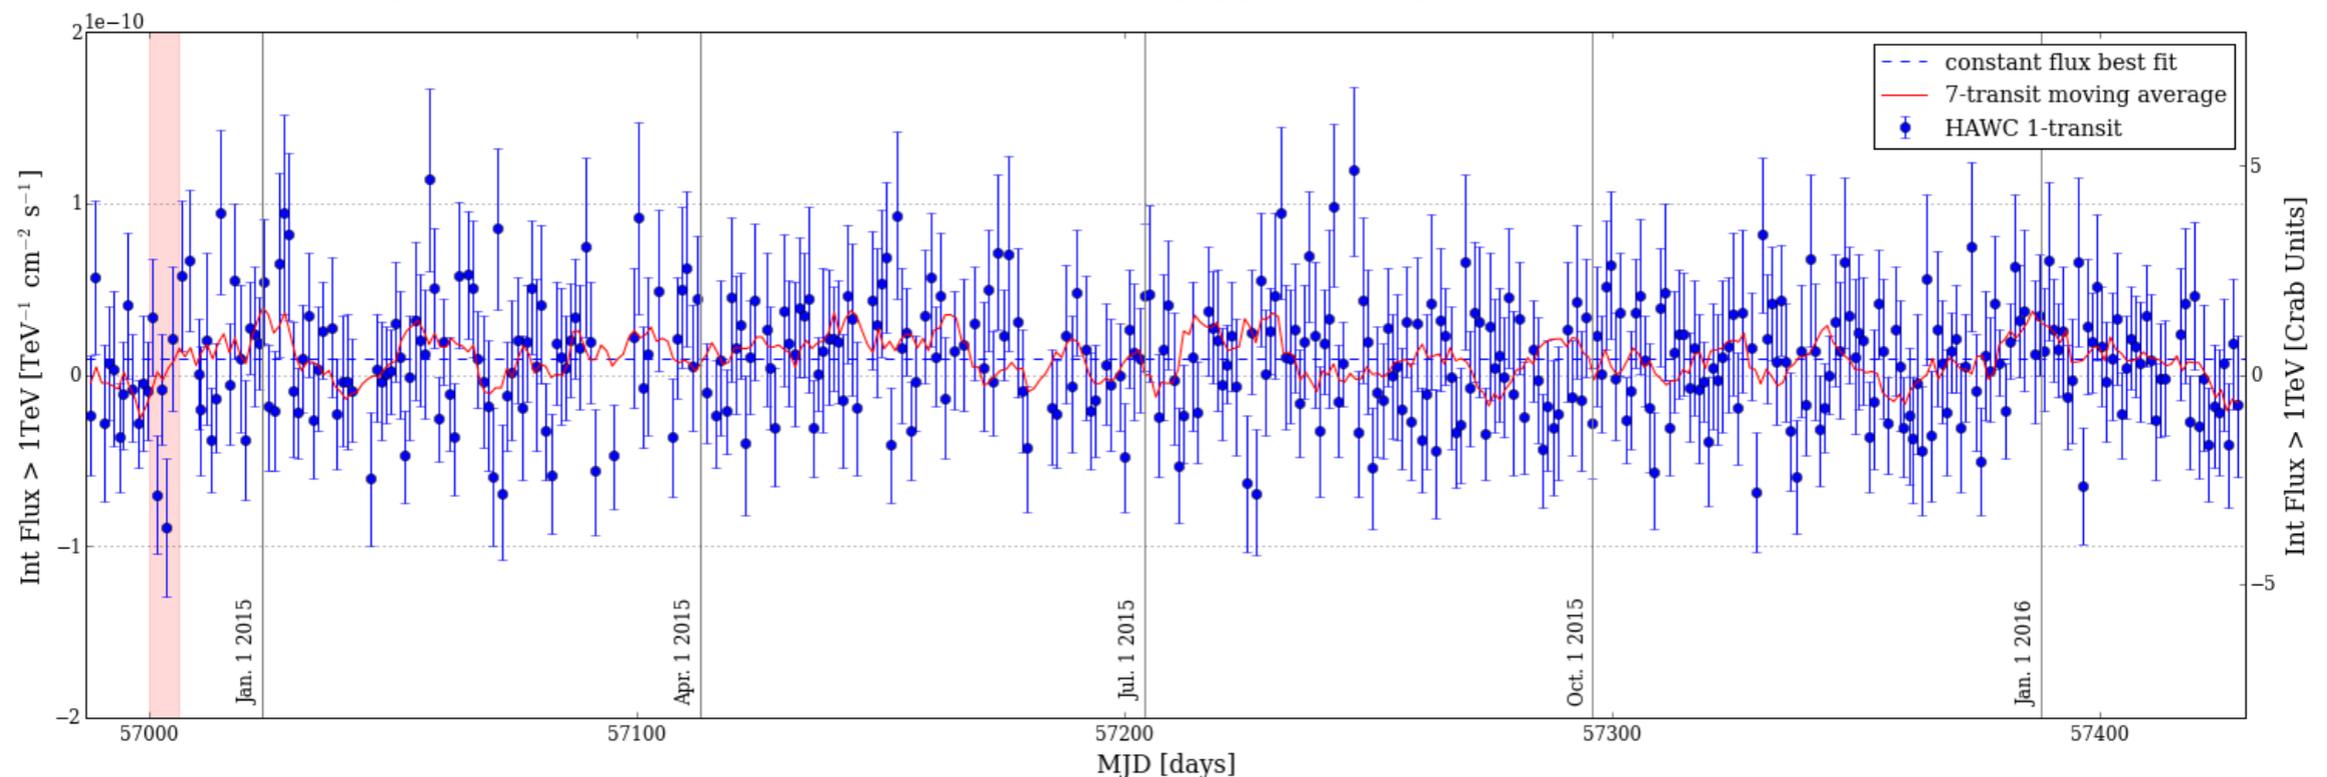

UNIVERSITY of
ROCHESTER

- RA: 40.14°, Dec: 61.26°
- Period: 26.71 days
- Mean IntFlux: $7.856 \times 10^{-12} \text{ TeV}^{-1} \text{ cm}^{-2} \text{ s}^{-1}$
- December flare **not observed**

Integral Flux of LS I +61 303 (3ML w/ sdi rejiggered maps, bins 1-9, ntrans >= 0.75)

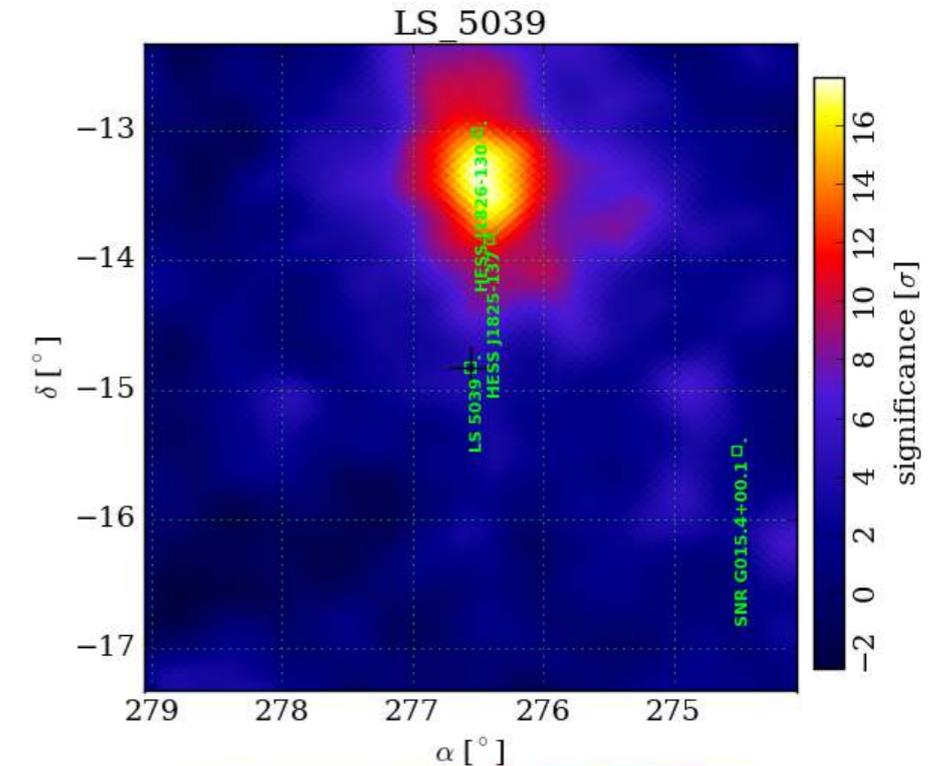

LS 5039

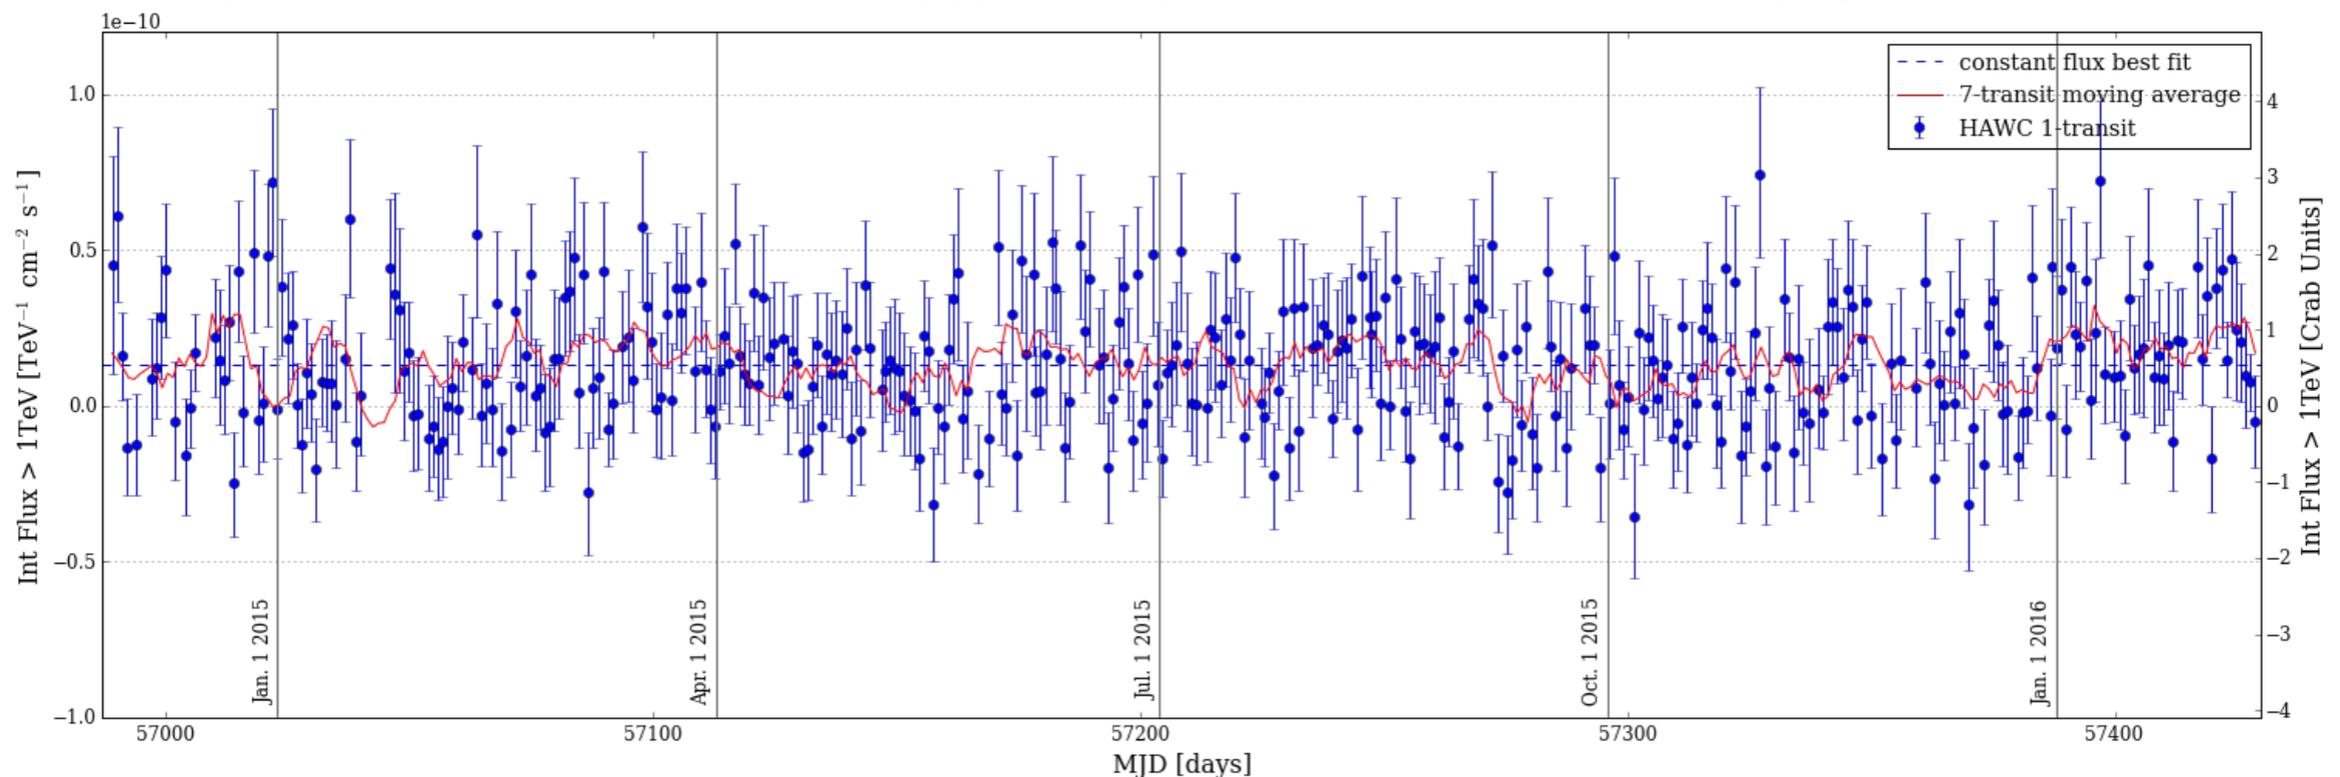

UNIVERSITY of
ROCHESTER

- RA: 276.56° , Dec: -14.83°
- Period: 3.907 days
- Near **2 bright TeV sources**
- Mean IntFlux: $1.391 \times 10^{-11} \text{ TeV}^{-1} \text{ cm}^{-2} \text{ s}^{-1}$

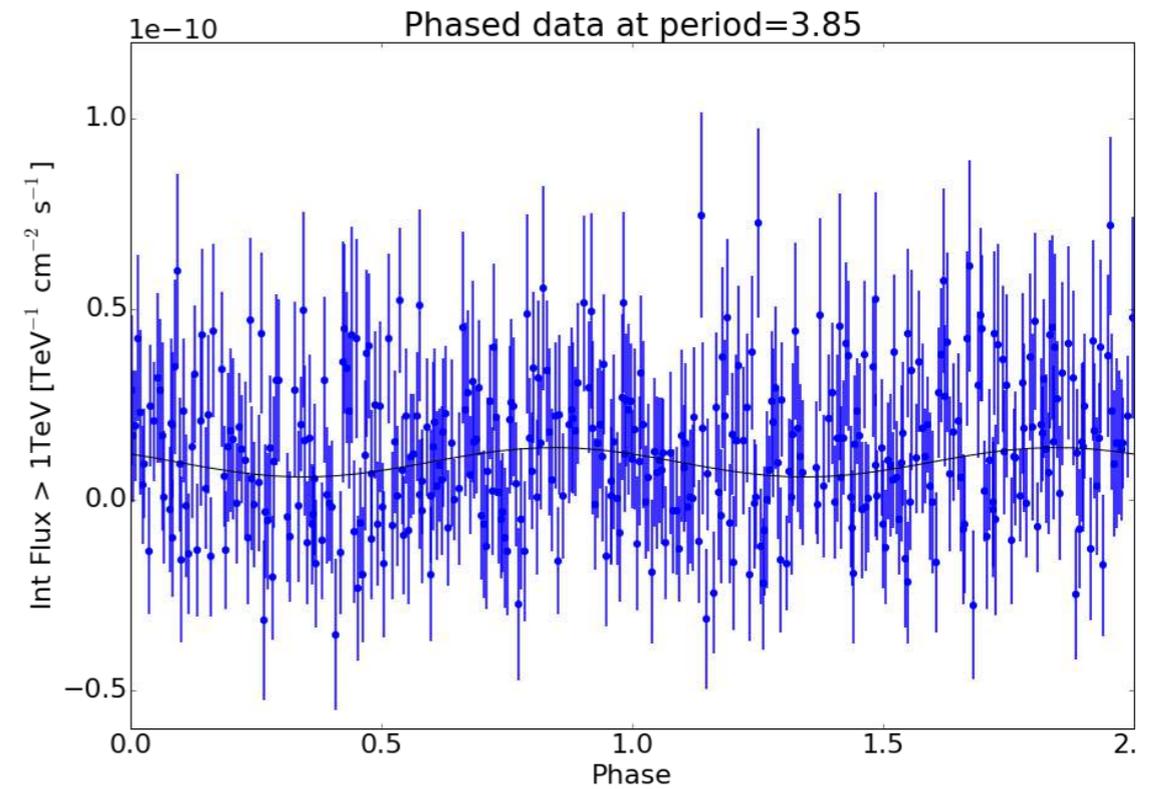

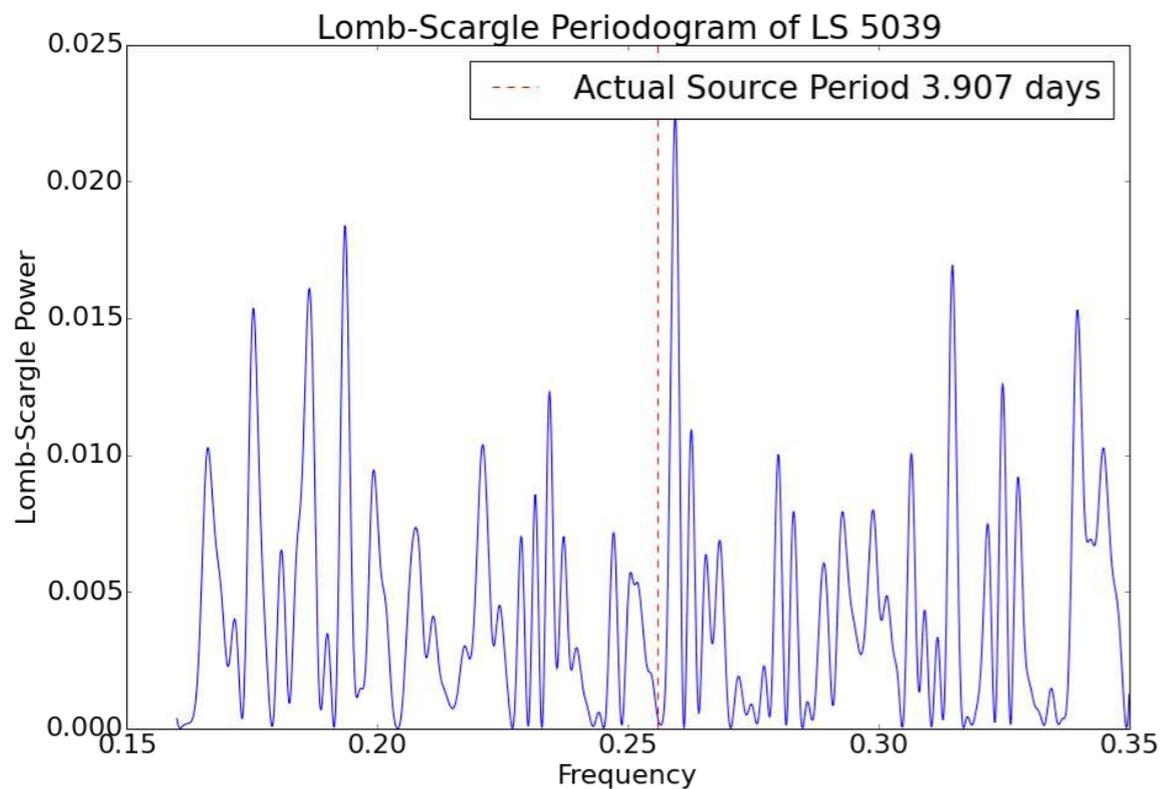

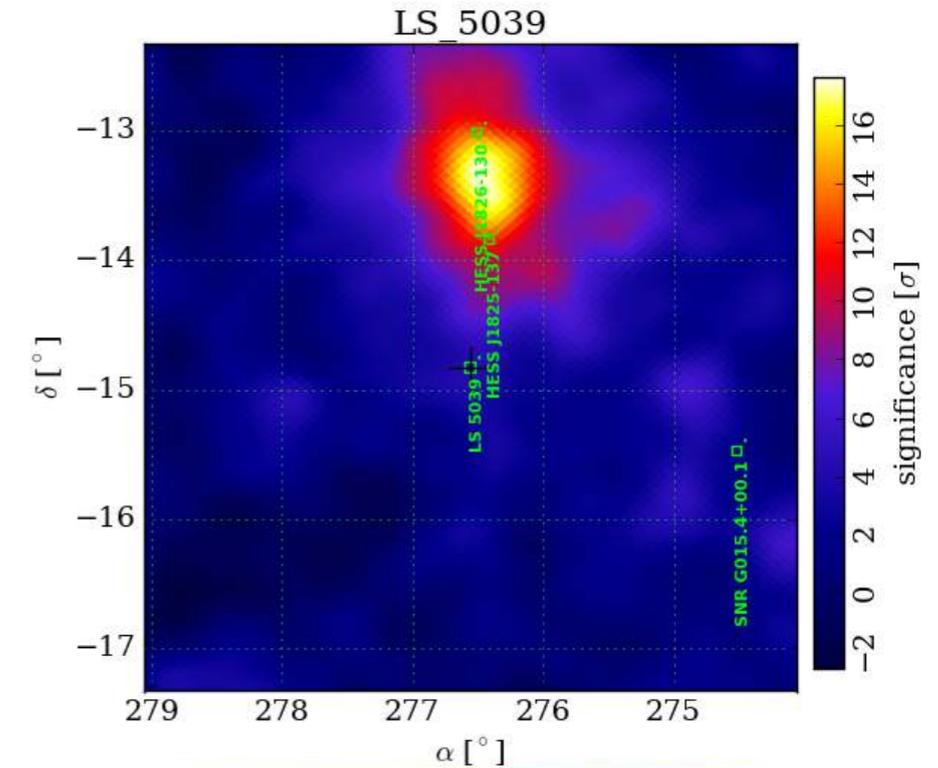

Integral Flux of LS 5039 (3ML w/ sdi rejiggered maps, bins 1-9, ntrans >= 0.75, single point source fit)

LS 5039

- Known period: 3.91 days
- Best fit period: 3.85 days
- **Probability peak is due to a background fluctuation is ~50%**

Future Work

- Better characterize background emission
- Fit nearby sources around LS 5039
 - Extended source model
- Model diffuse emission from galactic plane

Extra

- Shuffle x-axis data, recalculate periodogram
 - $n = 1000$
- Randomized datasets produce similar peaks
~50% of the time

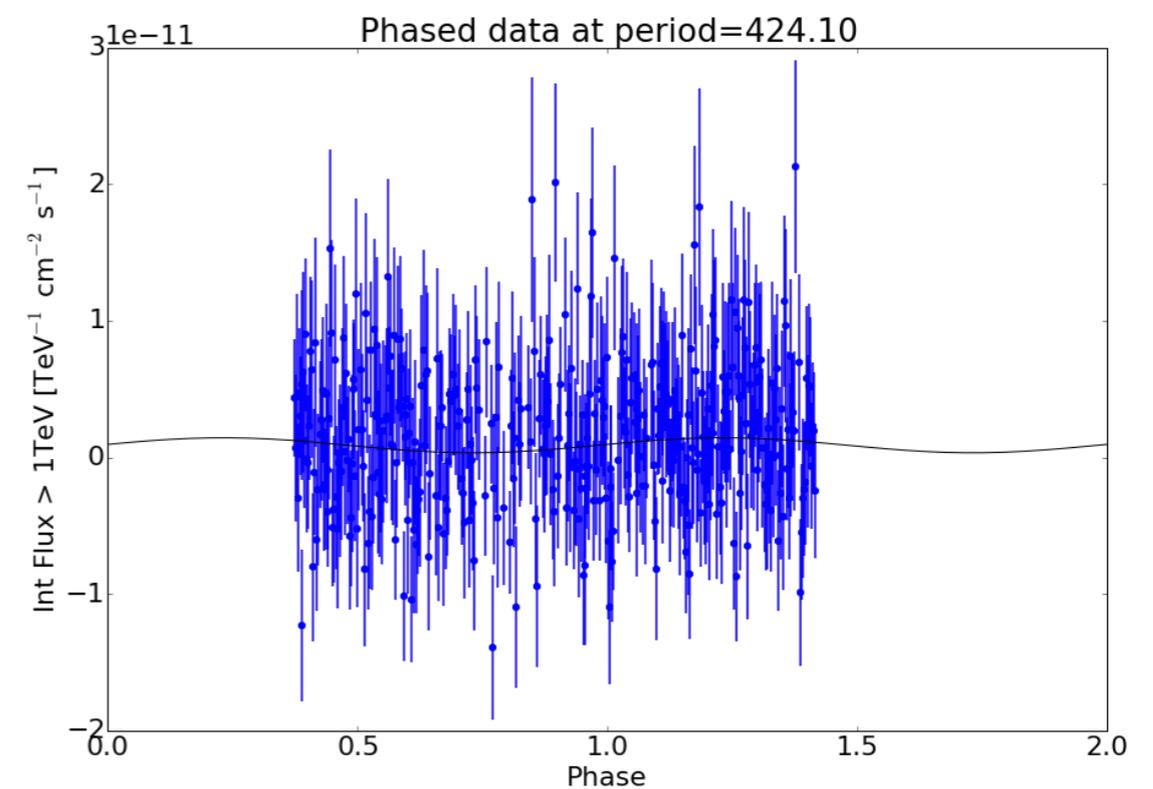

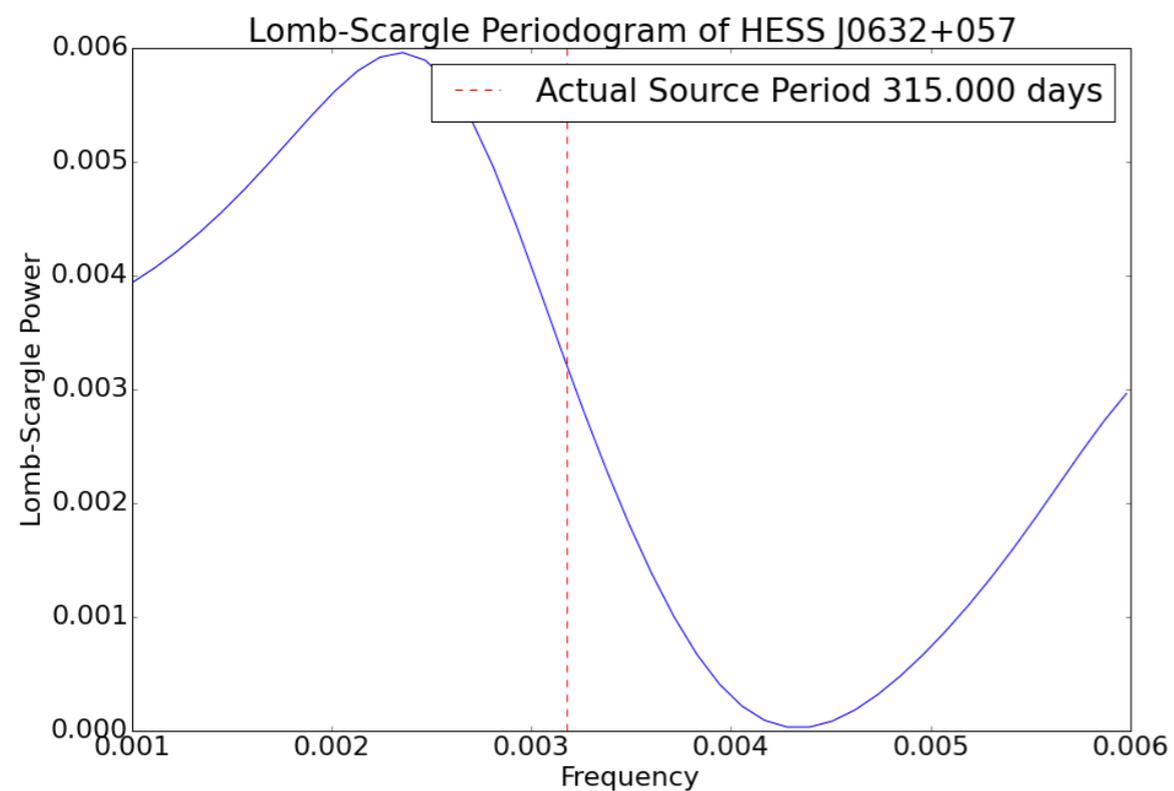

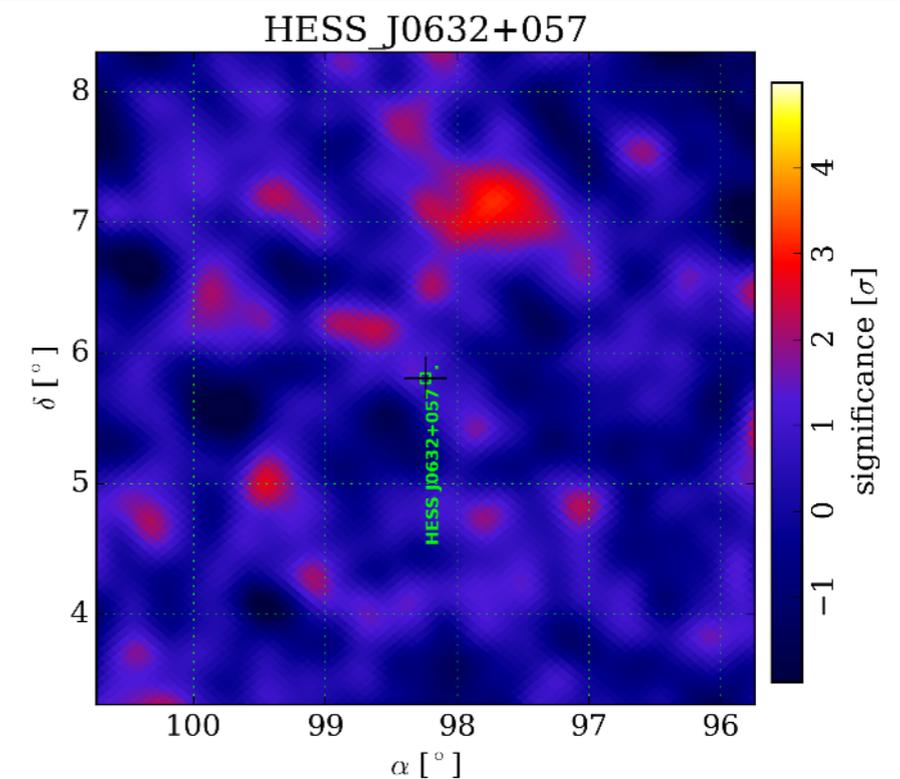

HESS J0632+057

UNIVERSITY of
ROCHESTER

- RA: 98.24° , Dec: 5.81°
- Period: 315 days
- Mean IntFlux: $1.975 \times 10^{-12} \text{ TeV}^{-1} \text{ cm}^{-2} \text{ s}^{-1}$

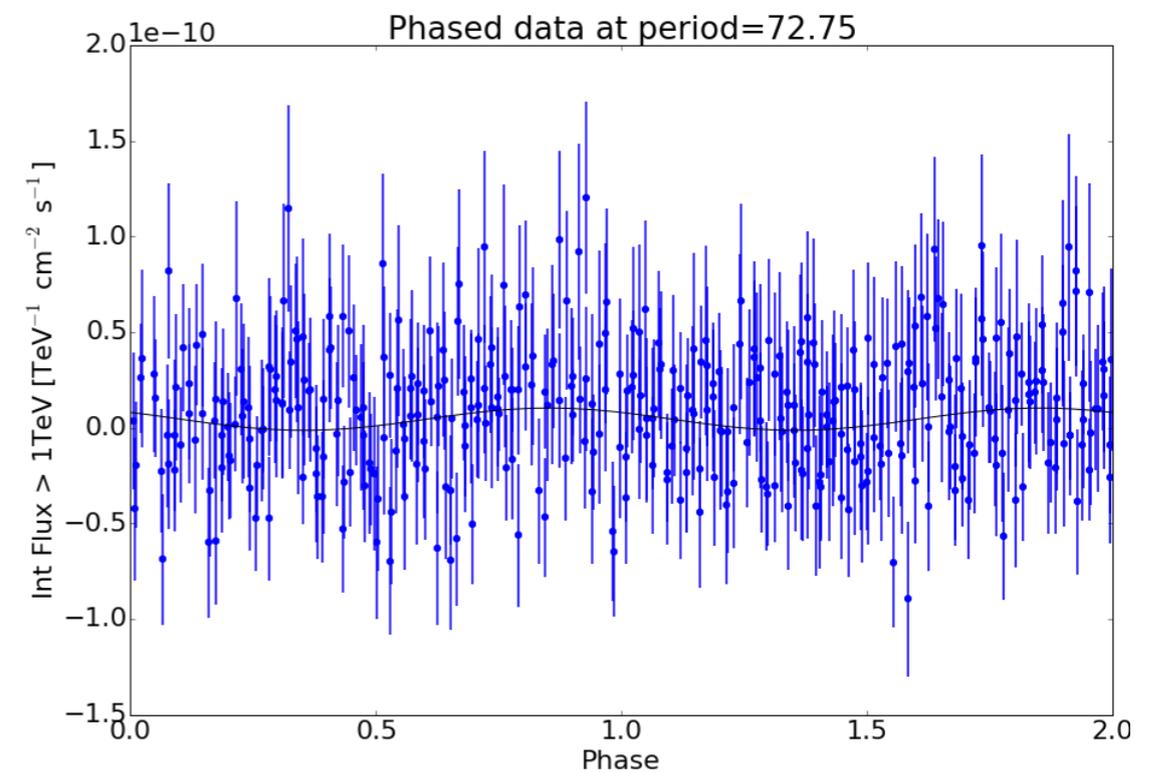

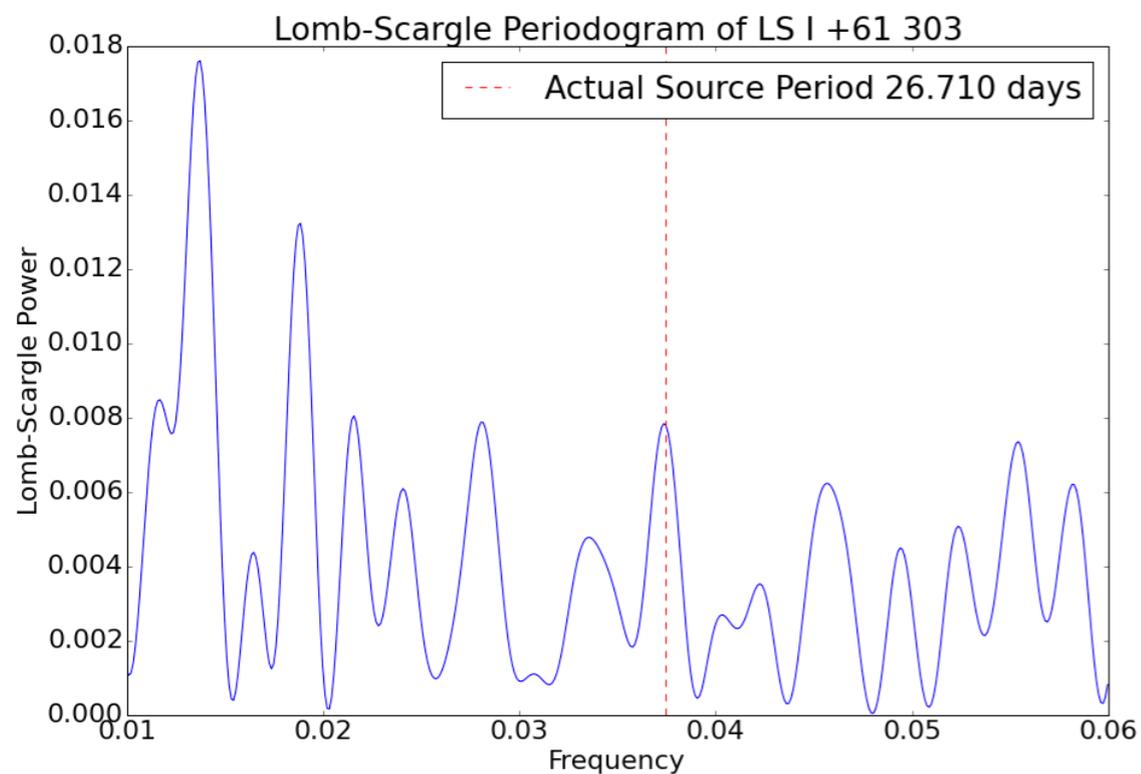

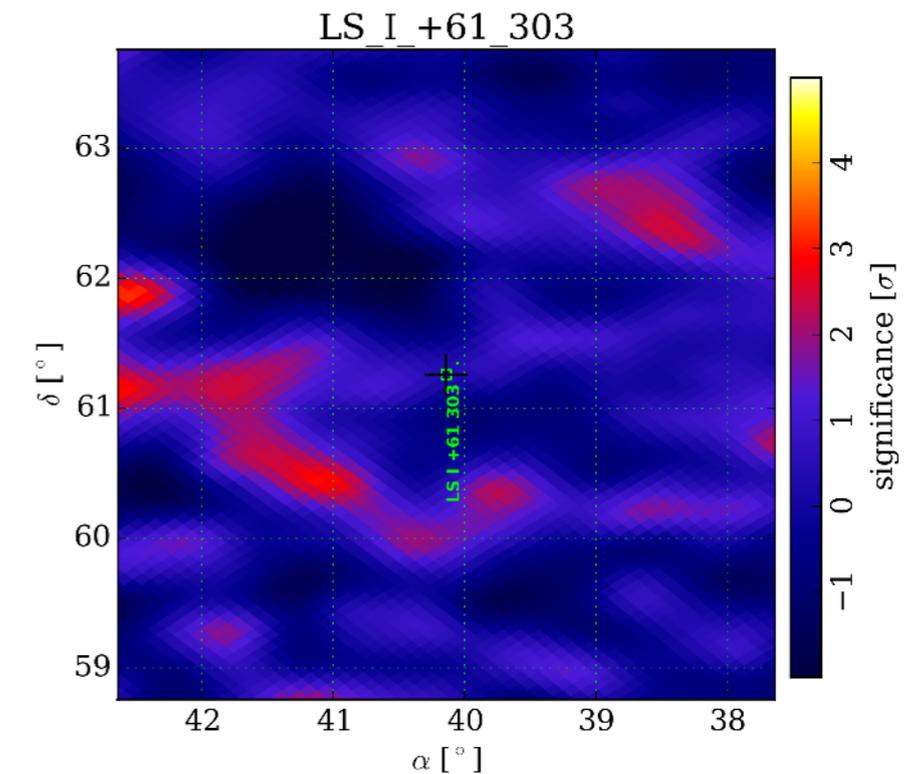

LS I +61° 303

UNIVERSITY of
ROCHESTER

- RA: 40.14° , Dec: 61.26°
- Period: 26.71 days
- Mean IntFlux: $7.856 \times 10^{-12} \text{ TeV}^{-1} \text{ cm}^{-2} \text{ s}^{-1}$
