

Figure 1: Density (g/cm^3) plots of a bipolar jet, 15-degree open angle (half), in the $\pm x$ directions. Other settings are the same as PN model A. Frames are 40 days apart at 2980, 3200, 3600, 4000 days. Outflow comes out at 3000 days.

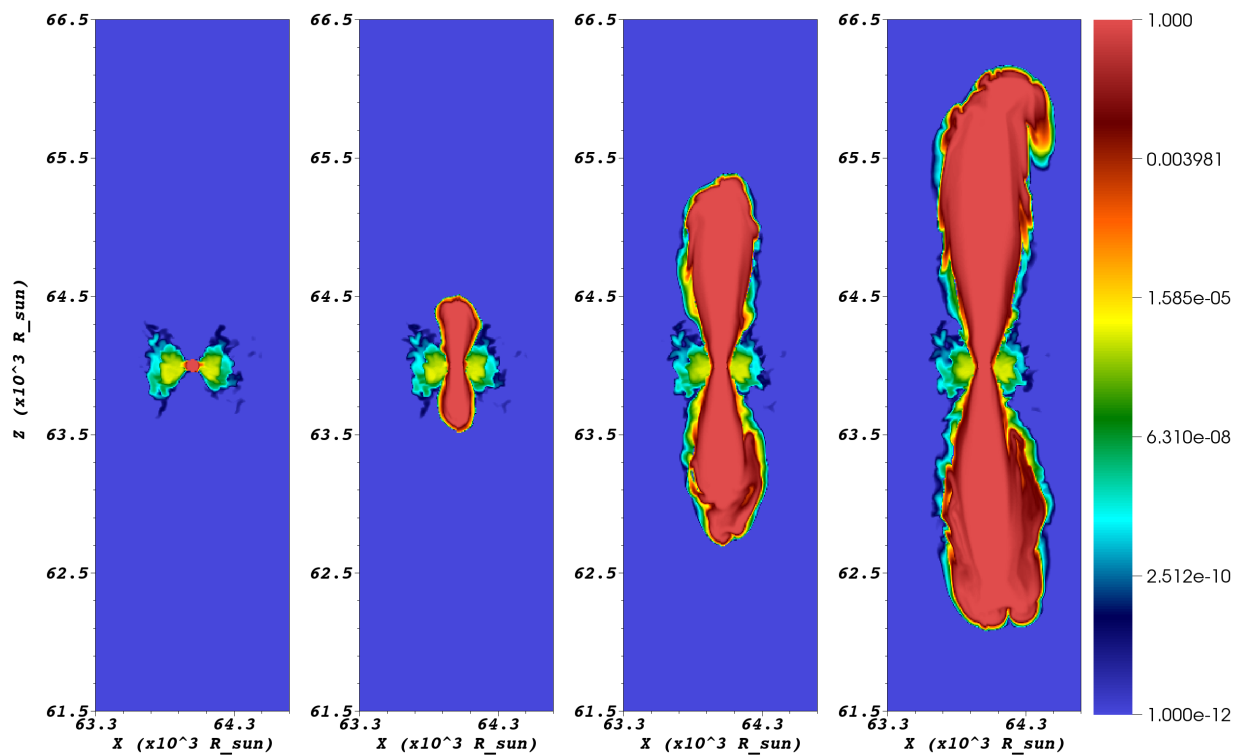

Figure 2: Tracer filling ratio, showing the same frames as figure 1.
